Overview

ABSTRACT

This survey provides information on household income and expenditure to be able to measure the levels and changes in the living condition of the people, to observe the consumption patterns and to compute various other indicators such as poverty, food ratio, gini co-efficient of income and expenditure etc.

Key objectives of the survey

- To identify the income patterns in Urban, Rural, Estate Sector and Districts.
- To identify the income patterns by income levels.
- Average consumption of food items and non food items
- Expenditure patterns by sector and by different income levels.
- To identify the incidence of poverty by sector and income levels

Sampling

Sampling Procedure

A two stage stratified random sample design was used in the survey. Urban, rural and estate sectors of the District are the domains for stratification. The sample frame is the list of buildings that were prepared for the Census of Population and Housing 2001.

Selection of Primary Sampling Units (PSU's)

Primary Sampling Units are the census blocks prepared for the Census of Population and Housing - 2001. The sample frame, which is a collection of all census blocks in the domain, was used for the selection of primary sampling units. A sample of 2500 primary sampling units was selected from the sampling frame for the survey.

Each selected block was updated to include newly built housing units and excluded demolished housing units, which are no longer in existence. This updating operation was also carried out over a period of 12 months, starting from June 2006 to May 2007. For each PSU, updating was done about one month prior to the scheduled interviewing.

Selection of Secondary Sampling Units (SSU's)

Secondary Sampling Units are the housing units in the selected 2500 primary sampling units (census blocks). From each primary sampling unit 10 housing units (SSU) were selected for the survey. The total sample size of 25000 housing units was selected and distributed among Districts in Sri Lanka.

Response Rate

The all Island response rate was 91%

Weighting

<http://www.statistics.gov.lk/HIES/HIES%202007/introduction%20%20HIES.pdf>

By visiting the above website a description about the adjustments for non-response could be read in section 1.4 of the preliminary report.

Questionnaires

Overview

The questionnaire was expanded to collect more information related to poverty such as expenditure on food and non-food and income received through different sources than the usual demographic characteristics of the members of the households.

The questionnaire used in the Household Income and Expenditure Survey - 2006/07 consists of nine parts. They are :

- i. Demographic Characteristics
- ii. School education (Aged 5 to 20 years)
- iii. Information related to health
- vi. Household expenditure
- v. Household income
- vi. part a : Inventory of durable goods
- vi. part b : Debts of the household
- vii. Access to facilities in the area
- viii. Information about housing
- ix. Agriculture holdings and livestock

Data Collection

Data Collection Mode

Face-to-face [f2f]

DATA COLLECTION NOTES

Trained personnel were employed for enumeration. An interview of a unit of survey took average five minutes. Additional information has been recorded on the questionnaire as remarks in extreme situations where the determination of a code is ambiguous. Interviews were conducted in all three languages depending on the joint preference of the enumerator and the respondent.

Data Collectors

Name	Abbreviation	Affiliation

SUPERVISION

A group of enumerators were supervised by a statistical officer and a group of statistical officers were handled by a Statistician.

Data Processing

Other Processing

Data was processed in District -wise batches and stored in separate files.

Data processing included the following steps:

1. Counting and accepting the filled questionnaires by the DP Division
2. Do a visual check for completeness
3. Preliminary editing and marking codes
4. Entry of data
5. Run edit program for each District batch
6. Produce error report and return to the Survey office
7. Correction of errors on the report
8. Change incorrect data using the corrected error report
9. Re-run the edit program and repeat the error correction procedure
10. Produce final report on clean data with a backup of clean data.

After all batches have been processed, all data files were combined together and then the following steps were completed for all the data files:

- 11) Re-coding of variables needed for analysis
- 12) Adding of sample weights
- 13) Tabulations

Data Appraisal

Estimates of Sampling Error

The estimation procedure is given in the section 1.4 in the Preliminary Report in the following website
