**ABSTRACT**

The employment/unemployment data are required at very short intervals to monitor the program made in the employment generating policies of the government. To satisfy this need, Sri Lanka Labour Force Survey was designed as a quarterly basis survey to measure the levels and trends of employment, unemployment and labour force in Sri Lanka. Thus the survey is repeated four times each year since the first quarter of 1990. Key objectives of the survey - To study the economically active / inactive population. - To analyze employment by major industry group and employment status. - To determine unemployment rates by level of education and by age group - To study the informal sector employment. - To determine the underemployment rates by sector and by major industries

**KIND OF DATA**

Sample survey data [ssd]

**UNITS OF ANALYSIS**

Individuals from the population aged 10 years or more

### Scope

---

**NOTES**

The scope of LFS 2009 includes the following key sections:- 1). Identification Information 2). Control Data 3). Personal Information 4). Information on Labour Force Identification and Personal Information are as follows:- Identification Information - Address, Province, District, D.S. Division, G. N. Division, Sector, Name of MC/UC/PS - Name of Ward/Village/Estate, Census Block Number, Sample Reference Number - Survey Quarter, Number of households, Name of the Head of the household - Identifications of Interviewers & Supervising Officers Personal Information - Relationship to Head of Household, Gender, Age, Ethnic Group, Religion, Marital Status - Educational Attainment, Attendance at Schooling or other Educational Institution - Professional / Technical Training, Persons who are working abroad

**TOPICS**

Topic	Vocabulary	URI
LABOUR AND EMPLOYMENT [3]	CESSDA	<a href="http://www.nesstar.org/rdf/common">http://www.nesstar.org/rdf/common</a>

### Coverage

---

**GEOGRAPHIC COVERAGE**

National coverage. [Excluding the Northern and the Eastern Provinces] This survey covered persons living in housing units only and, it excludes the institutional population.

**UNIVERSE**

Working age population (10 years and above) living in the non-institutional households in Sri Lanka

# Sampling

## Sampling Procedure

---

2.1 Sampling plan and the sampling frame A two stage stratified sampling procedure was adopted to select a sample of 22,500 housing units to be enumerated in the survey. The master sampling frame prepared for 2001 Census of Population and Housing was used as the sampling frame for the selection of sample for the labour force survey 2009. This main frame was updated after the Tsunami incident in 2007 using quick count method. 2.2 Sample size The quarterly survey was conducted since 1990 using a sample of 2,000 housing units per quarter in areas other than North and East, and the sample size was increased to 4,000 housing units per quarter in 1996 and continued thereafter. However, in 1992 and 1997, an annual sample of 20,000 housing units was selected to give reliable estimates of district level. In 2004 again 20,000 housing units were selected for the survey. However, in order to provide district level estimates precisely, it was decided to use 20,000 - 25,000 housing units as the annual sample from 2006. As such, in 2009, the annual sample of 22,500 housing units were selected. 2.3 Sample Allocation In 2008, 2,250 Primary Sampling Units (PSU's) are allocated to each district and each sector by using the Neymann Allocation method which considers the variance of unemployment rate as usually. The allocated sample for each district then equally distributed among the 12 months. Table 1 gives the sample distributions by district for year 2009. Table 1: Sample allocation by district - 2009

District	Housing Units	Total
Mullaitivu	390	22,500
Colombo	2,150	
Kilinochchi	360	
Gampaha	1,920	
Batticaloa	560	
Kalutara	1,210	
Ampara	900	
Kandy	1,400	
Trincomalee	390	
Matale	610	
Kurunegala	1,680	
Nuwara Eliya	600	
Puttalam	840	
Galle	1,200	
Anuradhapura	960

2.4 Selection of Primary Sampling Units (PSU) Primary sampling units are the census blocks prepared for the Census of Population and Housing - 2001. The sample frame, which was updated after Tsunami has been used for the selection of primary sampling units. 2.5 Selection of Secondary Sampling Units (SSU) Secondary Sampling Units are the housing units in the selected 2,250 primary sampling units (census blocks). From each primary sampling unit 10 housing units (SSU) are selected for the survey using random sampling method.

## Deviations from Sample Design

---

In 2008, the field work of the survey for the year 2009 was done in all twelve months in 2009. Even though it was planned to conduct the labour force survey in Northern and Eastern provinces, the survey could not be conducted properly in Northern province due to the prevailing conditions. In year 2009 the survey was carried out in Eastern province successfully as in 2008. Therefore, this report is based on an annual sample of 20,260 housing units, excluding only Northern province providing national, provincial and district level estimates with a stipulated standard errors of labour force characteristics as reported in the relevant reference periods of each 12 months of the year 2009. This survey covers persons living in housing units only and, it excludes the institutional population.

# Questionnaires

## Overview

---

Survey Schedule Current survey concepts and methods are very similar to those introduced at the beginning of the survey in 1990. However, some changes have been made over the years to improve the accuracy and usefulness of the data. Beginning in January 2006, some significant improvements were made to the labour force survey schedule in order to fulfill the requirements of its users and also to provide additional information for the planning purposes. This was done after carefully reviewing of the LFS schedule with the technical assistance provided by the Economic and Social Commission for Asia and the Pacific (ESCAP) Adviser. The revision was made focusing on literacy, household economic activities, informal sector employment and underemployment etc. This revised version of the questionnaire has been using since first quarter, 2006.

## Data Collection

### Data Collection Dates

Start	End	Cycle
2009-01-01	2009-12-31	12 months

### Data Collection Mode

Face-to-face [f2f]

#### DATA COLLECTION NOTES

Field Work The field work of the survey for the year 2009 was done in all 12 months from January to December 2009. Listing operation was also staggered over a period of 12 months starting from November 2008 to October 2009. For each primary sampling unit, updating was done, about two months prior to the scheduled interviewing. As such, for example, the census blocks which were surveyed in April, were updated in February. Statistical officers of the DCS were involved in the listing operation prior to the survey and also in the survey data collection operation. Each statistical officer is responsible for doing all statistical activities in a Divisional Secretariat division to which she/he is attached. These officers were given a thorough training before they were entrusted with the survey operations. In each district, there is an officer who is incharge of the statistical activities in the district.

### Data Collectors

Name	Abbreviation	Affiliation
Department of Census and Statistics	DCS	Ministry of Finance and Planning

#### SUPERVISION

Field supervision Senior officers of the DCS visited the Districts to check whether enumerators have done their work properly. These supervising officers were expected to submit their reports to the heads of the relevant divisions based on their observations.

## Data Processing

### Other Processing

---

Data was processed by district -wise batches and stored in separate files. Data processing included the following steps. 1. Counting and accepting the filled questionnaires by the DP Division 2. Do a visual check for completeness 3. Preliminary editing and marking codes 4. Entry of data 5. Run edit program for each District batch 6. Produce error report and return to the Survey office 7. Correction of errors on the report 8. Change incorrect data using the corrected error report 9. Re-run the edit program and repeat the error correction procedure 10. Produce final report on clean data with a backup of clean data. After all batches are processed, all data files were combined together and then the following steps are completed for all data files: 11) Re-coding of variables needed for analysis 12) Adding of sample weights 13) Tabulations

## **Data Appraisal**

### **Estimates of Sampling Error**

The estimation procedure is given in the section 2.6 in the Annual Report. The Annual Report is attached in the External Resources Section.

### **Other forms of Data Appraisal**

The adjustments for non-response is given in the section 2.7 in the Annual Report. The Annual Report is attached in the External Resources Section.
