PREFACE

The Department of Census and Statistics conducted a Household Survey of Agricultural Sector in 1988/89, with a view to obtaining detail information on Agricultural Households which are required for formulation and evaluation of Agricultural Policies and Programmes, and which cannot be obtained from decennial Agricultural Censuses.

This is the fifth survey conducted by the Department under National Household Survey Programme. Approximately 25,000 Agricultural Households were selected from all the districts. But due to the disturbances prevailed in the country at that time, districts in Northern and Eastern provinces could not be surveyed. In Matara, Hambantota and Moneragala also, only 50, 76 and 69 percent of the households selected could be surveyed respectively. It should also be noted that the field work of this survey was carried out during the height of insurgency and as such reliability of the estimates would have been affected.

This publication which is the final report (Preliminary report was published earlier) is based on data collected in twelve monthly rounds and give national, sector and district level data.

This report was prepared by the Staff of the Sample Survey Division under the guidance of Mrs. D.B.P.S. Vidyaratne, Deputy Director assisted by Mrs. S.M. Rajapakse, Mr. M. R. N. A. Fernando, Mr. K. G. Tillakaratne, Mrs. K. D. P. Susantha, Mr. M. A. N. Fernando, Mr. J. A. P. Balasuriya, Statisticians, Mr. J. A. Weerasinghe and Mr. J. A. P. Balasuriya Statisticians were responsible for preparation of data for Computer Processing.

The staff of the Sample Survey Division who actively involved in the survey from the preparations of survey material to coding, manual editing and correction of errors of the computer edits and Statistical Investigators of the Department who involved in the data collection under the direct supervision of District Statisticians/Statistical officers are gratefully acknowledged.

Acknowledgements are also extended to the Deputy Directors and System Analyst/Programmers of the Data Processing Division for the processing of data. The Deputy Director and his staff of the Printing Division is responsible for Printing of this report.

Finally, I am grateful to all officers who have contributed at different stages to the successful completion of the survey.

A. A. D. Cyril Yasasiri

12	Loans taken & subsidies given agricultural activities by source.	43

INTRODUCTION

This survey was the fifth in the series of surveys conducted by the Department of Census and Statistics (D.C.&S) under National Household Survey Programme. Field work of the survey was conducted during the period from February 1988 to January 1989 in twelve monthly rounds.

The main objective of this survey was to collect information on agricultural households which are required for formulation and evaluation of agricultural policies and programs, and which are usually not collected through decennial Agricultural Censuses. Information collected in this survey were on demographic characteristics of the household member such as age, sex, relationship to head of the household,etc., land utilization and ownership homegarden cultivation, labour utilization, their wages, inputs, outputs and sales and finally loans and subsidies taken.

Listing operation was done prior to the survey proper. At the listing stage the households with atleast one of its members engaged in cultivation, livestock/poultry keeping or fisheries, either as an employer or an own account worker or a labourer were identified and a list was prepared for the selected block. Details of this is discussed under the chapter on sample design of this report.

A sample of 25,000 agricultural households representing all the districts and sectors of the country was selected for this survey to give estimates at district level. But the survey could not be done in Northern and Eastern districts due to the disturbances.

In other districts also designated total sample could not be surveyed due to the disturbances prevailed in the country during the period 1988 and 1989. This situation was worse in districts like Matara, Hambantota and Moneragla. In Matara, only about 50 percent of the selected households could be surveyed. This may have affected very much to the reliability of the district estimates derived from the survey. (Details of this is discussed under the chapter on Non-response of this report).

Approximately 220 Statistical Investigators who belong to the permanent field staff of the D.C. & S were involved in the listing and survey operations. Statisticians or Statistical Officers attached to the districts functioned as immediate supervising officers.

2. Concepts and Definitions

2.1 Household

A household is a single person or group of persons who normally live together and have common cooking arrangements. It is not necessary that they be related to each other. Domestic servants, boarders, lodgers who live and have their meals with the family are also included as members of the household. Persons who usually live in the household but are temporarily away on holiday or vacation, visiting relatives, out on business or receiving treatment in a hospital are included. Those who have a usual residence elsewhere but present at the time of interview were excluded.

2.2 Head of Household

The head of household may be in most instances the principal breadwinner of the household. In certain instances a household may recognise a senior member as the head irrespective of his contribution to the household income. The head of household could be a male or female who is acknowledged as such by other members of the household.

2.3 Agricultural Activity :

Agricultural activity includes all types of crop cultivation, livestock rearing, poultry, and bee-keeping, fishing (coastal, deep sea, inland) fish breeding (inland) and fishing related activities. It includes all activities carried out up to harvesting (including harvesting) and also operations such as planning, organising and managing. It also includes work such as bringing of fertilizers and other farm necessities, etc.

2.4 Homegarden

A piece of land which has a dwelling house and having a seasonal and/or non-seasonal crop cultivation, is considered as a homegarden if the following conditions are satisfied.

- (i) The cultivator/cultivators reside in the dwelling house.
- (ii) The produce of the cultivation is mainly for home consumption.

2.5 Agricultural Employer

An agricultural employer is a person who operates an agricultural activity solely or partially owned by him/her with the aid of one or more regular paid workers employed for that purpose. These regular workers may be paid in terms of cash or kind. (A regular worker is a person who has been working continuously for a period over one month).

2.6 Agricultural Own Account Worker

An own account worker is a person who operates an agricultural activity solely or partially owned by him/her without the aid of any regular paid workers employed for that purpose. A person who operates and agricultural activity with the aid of unpaid family workers or with the aid of casual workers employed from time to time for period less than one month is considered as an own account worker.

2.7 Unpaid Family Worker :

A person who works in an agricultural activity operated by members of his/her household for by a group of persons including at least one member from his/her household, without payment in cash or kind is considered as an unpaid family worker.

2.8 Agricultural Labourer/Fisheries Labourer

A person who performs an agricultural fisheries activity for a wage or salary which is paid to him/her in cash or in kind, and work on a regular or irregular basis and do not contribute to the activity in terms of any capital or material or other inputs except his labour is considered as an agricultural labourer/fisheries labourer.

2.9 Paid Employee in Other Agricultural Services

An employee in other agricultural Services is a person who imparts his/her technical, managerial or any other know how related to an agricultural activity to personnel in that agricultural activity for wage or salary.

Following are some examples of such person who fall into this category.

1. Cultivation Officers
2. Agriculture extension officers
3. Agriculture Instructors
4. Farm Managers
5. Fisheries Inspectors.

2.10 Parcel

Parcel defined to be a piece of land cultivated singly or jointly and completely surrounded by natural boundaries such as roads, water ways patches of forest etc. and one or more pieces of land cultivated by other cultivators singly or jointly.

2.11 Person day

Eight hours of work done continuously or intermittently by a person is considered as a person day.

2.12 Person Hour

If a person has worked 1/2 an hour or more (approximately an hour) is regarded as a person hour.

2.13 Household Labour

Household Labour is labour contributed by the members of the household.

2.14 Attam Labour

If a person assist to another person in his agricultural work without any payment (in cash or in kind) but exchange the labour is known as attam labour.

2.15 Hired Labour

All the person engaged in agricultural activity as paid employees is considered as hired labour.

3. Sample Design and Estimation Procedure

3.1 Sample Design

A stratified two stage probability sample design was used with Census Blocks (CB) as primary sampling units (PSU's) and Agricultural households as secondary Sampling units (SSU's).

It was decided to include 2,500 census blocks in the sample. These 2,500 CBS were proportionately allocated between the 25 districts and the two sectors (urban and rural), based on the total of Agricultural personnel as at 1981 Population Census.

It was however noticed that the number of Agricultural Households in certain urban blocks were very few. Hence it was decided to double the number of urban blocks and to select 5 households from each urban block and 10 households from each rural block.

ALLOCATION OF FIRST STAGE SAMPLE UNITS BY DISTRICT & SECTOR

DISTRICTS	URBAN	RURAL	ALL ISLAND
1. COLOMBO	20	40	60
2. GAMPAHA	22	86	108
3. KALUTARA	10	122	132
4. KANDY	4	92	96
5. MATALE	2	94	96
6. NUWARA ELIYA	6	54	60
7. GALLE	12	96	108
8. MATARA	8	76	84
9. HAMBANTOTA	8	112	120
10. JAFFNA	62	106	168
11. MANNAR	4	56	60
12. VAVUNIYA	4	44	48
13. MULLAITIVU	6	42	48
14. BATTICALOA	16	92	108
15. AMPARA	12	108	120
16. TRINCOMALEE	24	60	84
17. KURUNEGALA	2	178	180
18. PUTTALAM	18	126	144
19. ANURADHAPURA	2	178	180
20. POLONNARUWA	4	92	96
21. BADULLA	2	118	120
22. MONARAGALA	2	106	108
23. RATNAPURA	4	164	168
24. KEGALLE	2	130	132
25. KILINOCHCHI	4	32	36
TOTAL	260	2404	2664

It was also decided that, the maximum number of blocks allocated to a district to be not more than 180 blocks and minimum to be not less than 36 blocks. The number of blocks within districts were adjusted as above and was readjusted so that in any district, the final number of sample blocks to be a multiple of 12. This enabled distributing the final number of blocks over the 12 rounds (monthly rounds). Finally the number of census blocks (PSU's) selected was 2,664 and the number of households selected (SSU's) was 25,340.

3.1.1 Selection of Blocks (selection of first stage sampling units - PSU's)

The blocks were selected with Probability Proportional to Size, the size measurement here was the number of Agricultural Households within the blocks as per 1981 Census of Population.

3.1.2 Selection of Households (Selection of Second stage sampling units - SSU's)

All blocks selected for a particular round were updated before selecting the SSU's. While updating the households within the block, they were listed on a form 'HSASL - 1' All the agricultural households in the block were listed in this form under 3 categories as follows ;

- A Category - Cultivation Households + Labourer Households
- B Category - Fisheries Households + Livestock/Poultry Keeping Households
- C Category - Homegarden Households

Again within A and B categories the households were reclassified as those with income less than or equal to 900 and those with income above 900. Within the C category the households were reclassified as those with homegarden less than or equal to 15 perches and those with homegarden greater than 15 perches.

Within each category the Households were serialy numbered. For example in category A, starting with 'Cultivation Households' in the 'less than Rs. 900/- income group' and ending with 'Labourer Households' in the above Rs. 900/- income group' the households were serialy numbered. The B and C categories too were serialy numbered in a similar manner.

The required number of SSU's from each category within the block was decided as shown below and this required number was selected using a systamatic random sampling method.

Criteria used in deciding the required number of SSU's from each category was as follows:

(1) Rural Sector: If the number of category A households were (10 households more than the number of category B households from a block) then, 6 households were selected from category A, and 2 households were selected from category B.

If the number of category B households were more than the number of category A households then 6 households were selected from the category B and 2 households were selected from the category A.

In a block if there were more than 1 household in category C then a maximum of 2 households were selected from category C. Suppose there was only 1 or zero C category households then, the remaining 1 or 2 households were selected from the other two categories depending on in which category there were more households.

(2) Urban Sector : If the number of category A households were more than the number of category B households then 3 households were selected from category A and 1 household was selected from category B and vice versa.

In a block if there are category C households then one category C household was selected. Suppose there were no category C households then one household was selected from either category A or category B depending on in which category there were more households.

Although it was planned to do the survey in the entire island and PSU's were selected for this purpose it was not possible to carryout the field work in Northern and Eastern Provinces (except a portion of Ampara) due to the disturbances. Hence the survey work was carried out only in 18 districts out of the 25 district.

3.2 Estimation Procedure

In this survey the districts were taken as strata. Within districts urban and rural sectors constitute different sub strata. As such, estimates have to be prepared seperately for each sub stratum and combined to get district estimates.

Let X be the estimate of a total of any given characteristic for the Jth district for the Kth month.

This could be given by:

$$\begin{aligned}
 \sum_{jk}^x &= \frac{1}{\sum_{jk(u)}^m} \left[\sum_{h=1}^m \frac{1}{h(u)} \left[\frac{N}{\sum_{ha(u)}^n} \sum_{i=1}^n \frac{1}{ha(u)} \sum_{ha(u)}^x \right. \right. \\
 &+ \frac{N}{\sum_{hb(u)}^n} \sum_{i=1}^n \frac{1}{hb(u)} \sum_{hb(u)}^x \\
 &+ \left. \left. \frac{N}{\sum_{hc(u)}^n} \sum_{i=1}^n \frac{1}{hc(u)} \sum_{hc(u)}^x \right] \right] + \dots \\
 \sum_{jk(r)}^m &= \frac{1}{\sum_{jk(r)}^m} \left[\sum_{h=1}^m \frac{1}{h(r)} \left[\frac{N}{\sum_{ha(r)}^n} \sum_{i=1}^n \frac{1}{ha(r)} \sum_{ha(r)}^x \right. \right. \\
 &+ \frac{N}{\sum_{hb(r)}^n} \sum_{i=1}^n \frac{1}{hb(r)} \sum_{hb(r)}^x \\
 &+ \left. \left. \frac{N}{\sum_{hc(r)}^n} \sum_{i=1}^n \frac{1}{hc(r)} \sum_{hc(r)}^x \right] \right] + \dots
 \end{aligned}$$

Where :

m
 $j_k(u)$ = Number of Urban blocks selected for the j th district for the k th survey month.

P
 $h(u)$ = Selection probability of h th block

$$= \frac{\sum_{h=1}^S j_h(u)}{\sum_{h=1}^M j_h(u)}$$

S
 $j_h(u)$ = Measure of size of the h th block in the urban sector of the district.

M
 $j_h(u)$ = Total number of blocks in the urban sector of the j th district.

m P S M
 $j_k(r)$, $h(r)$, $j_h(r)$ and $j_h(r)$, are the corresponding terms for the rural sector.

a = Cultivation Households+Labourer Households
 b = Fisheries households+Livestock/poultry keeping households
 c = Home garden Households

N
 $ha(u)$ = Total number of eligible households (cultivation and labourer households) listed in the h th block, in the urban sector.

n
 $ha(u)$ = The number of such households selected from the h th block in the urban sector.

N
 $hb(u)$ = Total number of eligible households (fisheries households and Livestock/poultry keeping households) listed in the h th block in the urban sector.

n
 $hb(u)$ = The number of such households selected, from the h block in the urban sector.

Category 1 and 2

These were considered as fully accounted for as a schedule was completed to the extent required by the situation at the time of interview and therefore, no adjustment was necessary.

Category 3

This is incomplete and therefore, a non-response adjustment was made for this category.

The assumption made here for the adjustment of non-response was the proportion of households in category 3 is the same as the corresponding proportion for sample household in category 1. This assumption is applied on a block by block basis separately for urban, rural and estate sectors.

The block weight before adjusting for unit non-response was $\frac{N^h}{n^h}$

Where

N_h = Total number of housing units listed in block h.

n_h = Number of housing units selected in block h.

The revised weight should take the form, $\frac{N_h}{n_h} \frac{n'_h - n_{h2}}{n_{h1}}$

Where

n_{h1} = number of sample households in category 1.

n_{h2} = number of sample households in category 2.

n'_h = total number of households in all categories

(category 1, 2 and 3.)

CONCEPT AND DEFINITIONS

Census Units :

Census Units are the units listed in the pre-listing form at the Census of Population and Housing - 1981

- (i) Housing unit :
A housing unit is a place of residence.
 - (a) Where there are walls or partitions separating it so that the occupants could live separately from other persons.
 - (b) has independent access.

- (ii) Living quarters other than housing units :
A building or a group of buildings where a number of persons generally not related, reside under the supervision of a person in-charge.

e.g. hospital, police barrack, boarding house etc.

- (iii) Non-housing unit: A building or a part of a building which is not a place of residence and does not form a part of housing unit.

e.g. office, petrol filling station etc.

Household

A household is a single person or a group of persons who normally live together and have common cooking arrangements. It is not necessary that they be related to each other. Domestic servants, boarders, lodgers who live and have their meals with the family are also members of the household. Persons who usually live here but are temporarily away on holiday or vacation, visiting relations, out on business or receiving treatment in a hospital should be included. Those who have a usual residence elsewhere but present at the time of interview should be excluded.

Head of Household

The head of household may be in most instances the principal bread winner of the household. In certain instances a household may recognise a senior member as the head irrespective of his contribution to the household income. The head of household could be a male or a female member who is acknowledged as such by other members of the household.

Literacy

A person who can both read and write with understanding a short statement is considered as "literate". A person who can read and write only his own name, figures or a memorised phrase should be considered as "illiterate".

Marital Status

The marital status of a person refers to the current "defacto" conjugal status of the person.

A person claiming to be married according to custom or repute should also be treated as married, although the marriage has not been registered according to law.

"Separated" refers to a person who has been granted a decree of separation by law and not to a person merely living in separation.

Employed

If (s)he works as a paid employee, employer, own account worker or unpaid family worker in any economic activity is said to be employed.

Unemployed

Persons engaged in studies as his/her main activity are considered as students. She/he may be attending school or some other educational institution or may be studying as a private student.

Household Worker

Activities such as preparing food for household consumption, keeping house, making, mending and washing clothes, looking after children and older members of the household etc; which are carried out for the maintenance of the household are considered as household work.

Retired/Unable to work

Persons not employed or unemployed as defined above, who had retired from employment and/or were unable to work due to disability or ill-health.

Employer

A person who operates an enterprise or a person who operates an enterprise in partnership with others with the aid of one or more paid employee is considered as an employer.

Employee

- (i) **Government Employee** : (S)he is an employee of the government who is paid by the government. Employees of all government departments, ministries, government schools are government employees.

Persons employed by a contractor doing a contract job for the government such as constructing buildings, repairing and maintaining equipment should not be considered as government servants.

- (ii) **Semi Government Employee** : (S)he is a person employed by any state corporation, a state board and the following state banks, National Savings Bank Bank of Ceylon, People's Bank, State Mortgage Bank and also all state owned business undertakings and local government authorities. e.g. Cement Corporation, Building materials Corporation, Sugar Corporation, Tea Board, Janatha Estate Development Board, Mahaweli Development Board, Universities, Local Bodies, etc.
- (iii) **Other Employee** : An "Other Employee" is any person who is an employee of an institution other than a government or semi government institution employees of private banks and other private sector institution.

Own Account Worker

A person who operates an enterprise or a person who operates an enterprise in partnership with others, without the aid of an employee is considered as an own account worker. However, (s)he may get the assistance of unpaid family worker and household servants.

Unpaid family worker

A person who works in an enterprise operated by a member of his household or by a group of persons including atleast one member from his household without a payment in cash or in kind.

Main Occupation :

Main occupation is the occupation on which she/he usually works most of the time. If she/he is engaged in only one occupation then it should be the main occupation. e.g. English typist, Science teacher.

Secondary Occupation

Any activity undertaken by the respondent for pay profit or family gain in addition to the main occupation is considered as the secondary occupation.

Industry

The nature of the work done by the institute or the workplace/enterprise where a person works is referred to as the "Industry". If more than one activity is performed by the institute, nature of the work done by the division where this person works should be given here.

e.g. If a typist works in the advertising division of a firm where there are two divisions, namely advertising and legal services, the industry in respect of this person is advertising. If he does typing for both divisions give a note to say that he works in both advertising and legal services division.

2. DEMOGRAPHIC CHARACTERISTICS

Income & Expenditure Survey reveals that the estimated island population (excluding Northern & Eastern provinces) is 14.1 million in 1990/91. The sectorial distribution of the population shows that the Urban Sector consists of 3 million, rural sector 10.2 million and the estate sector 0.9 million.

It should be noted that this report relates only to the population in households as the survey excluded the persons living in institutions such as police barracks, army camps, hostels and boarding houses with more than 5 boarders.

Table 2.1 Population Distribution by Age Group and Sex - All Island

Age Group	All Island					
	Total	%	Male	%	Female	%
All ages	14122407	100.0	6976576	100.0	7145831	100.0
0 - 4	1164600	8.2	588338	8.4	576262	8.1
5 - 9	1534694	10.9	756606	10.8	778088	10.9
10 - 14	1738080	12.3	885063	12.7	853017	11.9
15 - 19	1483983	10.5	753309	10.8	730674	10.2
20 - 24	1310720	9.3	650509	9.3	660211	9.2

Ethnicity

The ethnic distribution of the population shows that 11.7 million are Sinhalese which is 83% of the total population. The percentage distribution of other groups viz. Sri Lankan Tamils, Indian Tamils and Sri Lankan Moors are 4%, 5% and 8% respectively. Minor group consists only 0.7 percent of the total.

(excluding North & East)

Education Level

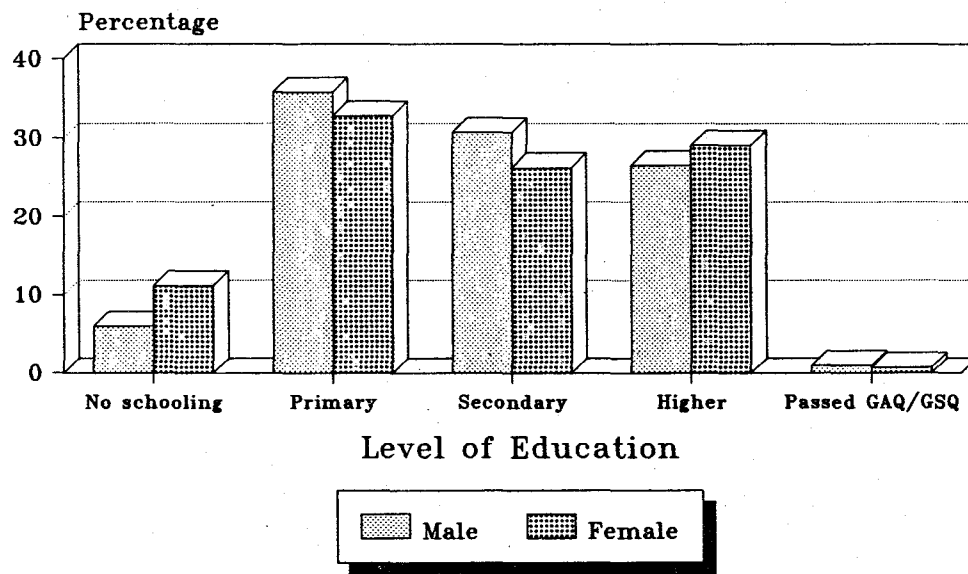

The population which is 5 years and over is estimated at 13 million. Out of this 91 percent had obtained some level of education. Those who had primary education recorded the highest percentage which is 34.3 percent. Among those who have had no education at all females were highest with 11.2 percent and males 6 percent.

(age 5 years & over) by Level of
Education and Sex

Literacy

Overall literacy rate of the population is 86.9. The sex differential is not prominent in the age groups 10-19 and 20-39 but it is seen that females are far behind males when they are 40 years and over. This fact is illustrated in chart 2.3.

PART II - SURVEY RESULTS

1. DEMOGRAPHIC CHARACTERISTICS

1.1 Introduction

Demographic information was collected from all the usual residents of the households with at least one of its members engaged in cultivation or livestock poultry, bee-keeping or fisheries activities. In addition to these, the members who were 10 years of age and above were interviewed to identify whether they were engaged in any agricultural activity and if so, the details of employment status were obtained.

The activities were classified into four major categories namely seasonal crop cultivation non-seasonal crop cultivation, livestock, poultry and bee keeping and fishing and fish breeding. The employment status such as employer, own account worker, unpaid family worker of the persons engaged in household agricultural activities were collected in respect of each major categories.

It should be noted that the analysis given in this chapter, relates only to the persons living in agricultural households and survey excluded the persons living in Northern and Eastern provinces except Ampara District.

1.2 Distribution of Household members engaged in agricultural activities

1.2.1 Age and Sex Composition

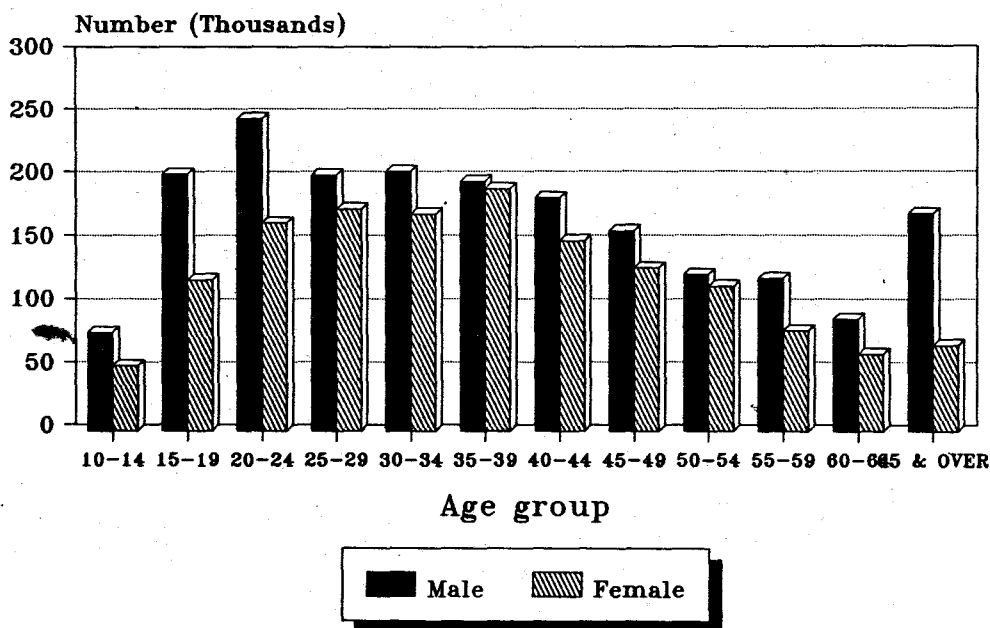

TABLE 1.1 - NUMBER OF HOUSEHOLD MEMBERS ENGAGED IN AGRICULTURAL ACTIVITIES BY AGE AND SEX

Age group	M	%	F	%
Total	1978486	100.0	1475335	100.0
10 - 14	78143	3.9	51914	3.5
15 - 19	202818	10.3	119436	8.1
20 - 24	247069	12.5	164295	11.1
25 - 29	202152	10.2	175043	11.9
30 - 34	204760	10.3	171157	11.6
35 - 39	196982	10.0	190687	12.9
40 - 44	183949	9.3	150374	10.2
45 - 49	157878	8.0	128908	8.7
50 - 54	123780	6.3	114290	7.7
55 - 59	120761	6.1	79818	5.4
60 - 64	88911	4.5	61191	4.1
65 & Over	171283	8.7	68222	4.6

Of the total members 57.3 percents were male and 42.7 per cent were female figures being 1978486 and 1475335 respectively.

The table 1.1 shows the highest number of males engaged in agricultural activities were in age group 20-24 (12.5%) and female were in age group 35-39 (12.9%). Among the districts, the highest number of persons engaged in agricultural activities were in Kurunegala for both sexes. It is 13.8 percent for males and 14.9 percent for female (see Table 3).

Chart 1
DISTRIBUTION OF HOUSEHOLD MEMBERS ENGAGED IN AGRICULTURAL ACTIVITIES BY AGE & SEX

1.2.2 Educational Attainment

The table 1.2 shows that 5.9 percent of the males had never attended school while 13.1 percent of the females. In this segment of population, very small percentage had been able to reach G.C.E. Advance level, University Education was limited only to a very small percentage for both sexes. It is 0.7 percent for males and 0.4 percent for females. It is evident from these facts that the people who have attained higher educational levels were not significantly involved in agricultural activities.

TABLE 1.2 - NUMBER OF HOUSEHOLD MEMBERS ENGAGED IN AGRICULTURAL ACTIVITIES BY LEVEL OF EDUCATION & SEX

Level of Education	M	%	F	%
Total	1979687	100.0	1474134	100.0

1.2.3 Employment Status

Table 1.3 reveals the highest concentration of employment was the own account worker groups (59.1%) for males while it was the unpaid family worker group (81.4) for females in seasonal crop cultivation. The same pattern can be seen in the case of non-seasonal crops, livestock, poultry and bee-keeping. But in the case of fishing and fish breeding activities, females were significant in own account worker group, percentage being 38.6.

Chart 3
DISTRIBUTION OF PERSONS ENGAGED IN AGRICULTURAL
ACTIVITIES BY EMPLOYMENT STATUS

2. LAND AND LABOUR UTILIZATION

2.1 Land Utilization

Information regarding land utilization mainly gives the number of households engaged in cultivation activities by tenurial categories and number of households and area of land by land ownership. In addition to that, sectorwise data has been given on land ownership by size of the household.

TABLE 2.1 - PERCENTAGE OF HOUSEHOLDS ENGAGED IN CULTIVATION ACTIVITIES BY TENURIAL CATEGORIES (ALL ISLAND)

Acttivity	All house-holds	Type of tenure			
		Owned land	Tenent land	Govt. land	Other land
Cultivation	100.00	59.0	08.2	27.2	05.6

Table 2.1 shows the percentage of households engaged in crop cultivation activities by their tenurship of the land. At all island level, it can be seen that more than half of the households have cultivated their own land and more than one fourth of the households engaged in cultivation activities in government land which consists of the land taken on permits, grants, long term leases and encrochments. More than 8% of the total households cultivate the land which were taken from Ande, leasing, renting and/or mortgaging from others.

Chart 4
DISTRIBUTION OF AGRICULTURAL HOUSEHOLDS BY
TENURIAL CATEGORIES

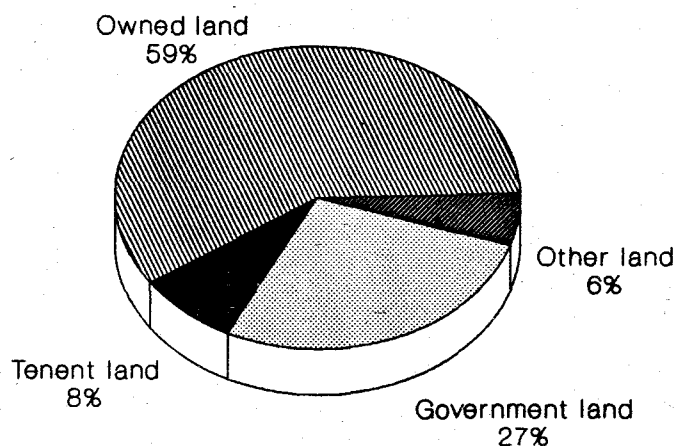

TABLE 2.2 - PERCENTAGE OF HOUSEHOLDS BY OWNERSHIP OF THE LAND (ALL ISLAND)

Cultivation activity	All households	Type of ownership			
		Owned land	Otherwise possessed only		
			Tenented land	Encrochments	Owned, tenented, & encroachments
Paddy	100.00	62.9	23.5	04.1	09.5
Highlands	100.00	85.0	05.1	00.1	09.8

Summary table 2.2 on land ownership gives the information by type of cultivation for paddy and highlands. It is seen that paddy and highland cultivation show a different picture in land ownership. Two thirds of the total households have their own paddy lands and this percentage is 85% regarding high lands.

TABLE 2.3 - PERCENTAGE OF AREA BY OWNERSHIP OF THE LAND (ALL ISLAND)

Cultivation activity	All households	Type of ownership			
		Owned land	Otherwise possessed only		
			Tenented land	Encrochments	Owned, tenented, & encroachments
Paddy	100.00	54.5	25.6	03.3	16.6
Highlands	100.00	79.2	05.3	00.1	15.4

Table 2.3 gives the percentage of area by ownership of paddy and highlands. It is noted that the distribution of area among ownership categories is similar to the distribution of households according to the ownership categories.

Table 2.4 gives sector-wise data on land ownership according to the size of the household for paddy and highland crops. It is noted that the percentage of area owned increases with the increase of the size of the household in both sectors for both kind of crops. At the same time, the percentage of area otherwise possessed decreases with the increase of size of the household in both sectors and for both kinds of crops. Comparing data between urban and rural, it can also be observed that urban sector has more percentage of owned area than rural for all households.

TABLE 2.4 - PERCENTAGE OF LAND OWNERSHIP BY SIZE OF THE HOUSEHOLD FOR PADDY AND HIGHLAND CROPS AND BY SECTORS

Size of the household	Total		Owned area		Area leased in, taken on Ande, rented in and mortgaged in		Other (encroachments)	
	Pad dy	High land	Pad dy	High land	Pad dy	High land	Pad dy	High land
Total-All island	100	100	62	85	34	4	4	11
Urban	100	100	85	96	15	2	0	2
Rural	100	100	61	85	34	4	5	11
1 - 4-All island	100	100	52	85	43	4	5	11
Urban	100	100	77	93	23	3	0	4
Rural	100	100	52	85	44	4	4	11
5 - 9-All island	100	100	68	86	28	3	4	11
Urban	100	100	88	98	12	1	0	1
Rural	100	100	68	85	28	4	4	11
10 & Over-								
All island	100	100	77	84	19	5	4	11
Urban	100	100	95	100	5	0	0	0
Rural	100	100	76	84	20	5	4	11

Chart 5
LAND OWNERSHIP BY SIZE OF THE HOUSEHOLD

2.2 Labour Utilization

Information regarding labour utilization in different agricultural activities are given in the tables from 12 to 15 . As the data were obtained in respect of different reference periods, a single person could have been counted more than once in different activities. Information with regard to seasonal crops have been collected in respect of Maha and Yala seasons and for non-seasonal crops information was obtained in respect of a period of one year. For other two categories of activities, viz. livestock and poultry, bee keeping and fishing activities data were collected in respect of a period of one month.

Considering the pattern of time spent on different activities given in person days for seasonal and non-seasonal crops and for all other activities, this has been given in person hours.

TABLE 2.5 - PERCENTAGE DISTRIBUTION OF LABOUR UTILIZATION FOR AGRICULTURAL ACTIVITIES BY TYPE OF LABOUR

Agricultural activity	Total labour	Type of labour		
		Household labour	Attam labour	Hired labour
Seasonal crops	100.0	66.9	11.4	21.7
Non-seasonal crops	100.0	74.1	01.7	24.2
Livestock, Poultry, & bee keeping activities	100.0	95.9	-	04.1
Fishing activities	100.0	58.9	-	41.1

Table 2.5 shows the percentage distribution of different types of labour in agricultural activities. According to that, the household labour has more contribution in livestock, Poultry and bee keeping activities. The attam labour input for seasonal crops activities is also a substantial amount but, this is very small in the case of non-seasonal crops activities. It could also be seen that there is no attam labour contribution in livestock, poultry and bee keeping and Fishing activities. Nearly half of the labour inputs covered with hired labour in fishing activities.

TABLE 2.6 - PERCENTAGE DISTRIBUTION OF LABOUR UTILIZATION FOR AGRICULTURAL ACTIVITIES BY TYPE OF PERSON

Agricultural Activity	Total	Type of Person		
		Men	Women	Children
Seasonal crops	100.0	64.6	32.5	02.9
Non-seasonal crops	100.0	60.6	36.2	03.2
Livestock, Poultry and bee keeping	100.0	62.9	29.9	07.2
Fishing activities	100.0	90.4	07.2	02.4

The districtwise distribution of labour utilization in agricultural sector by men, women and children have been given in tables from 12 to 15. Such information are summerised and presented in table 2.6. It could be noted that, comparing to women and children, the labour participation of men in agricultural activities is considerably high and this amount is very high in the case of fishing activities. It can also be seen that participation of women in crop cultivation, livestock, poultry and bee keeping activities is nearly one third of the total labour inputs. But in the case of fishing activity this rate is quite small when compared with other activities. According to data obtained on child labour participation, the rate of child labour participation is very small in crop cultivation and fishing activities. But this rate is some what significant in livestock, paultry and bee keeping activities.

TABLE 2.7 - PERCENTAGE DISTRIBUTION OF LABOUR UTILIZATION FOR LIVESTOCK, POULTRY, BEE KEEPING AND FISHING ACTIVITIES BY SECTOR

Sector	Total	Household labour			Type of Labour			
		M	W	C	Total	M	W	C
All-								
Island	100.0	65.7	27.9	06.4	100.0	81.8	11.8	06.4
Urban	100.0	76.0	20.3	03.7	100.0	97.9	01.1	01.0
Rural	100.0	65.0	28.4	06.6	100.0	79.6	13.3	07.1

In table 2.7 sectorwise data on labour participation of men, women and children by type of labour shows a quite different picture between urban and rural. In the case of household labour, more than three fourths of the share was contributed by men. In the case of women and child participation these rates are higher in rural areas. Specially, in the case of child labour participation, this rate is doubled in rural areas, when compared with urban areas.

In the case of hired labour the participation rate of men in urban sector has covered almost the whole labour market for agricultural activities. Women and child labour have not made a considerable contribution in this sector.

3. ASSETS ,INPUTS,OUTPUT AND SALES

3.1 Assets used for agricultural activities

Information on four major type of assets namely

- (a).Animals
- (b).Agricultural implements:machinery and tools,
- (c).Transport equipments
- (d).Bee keeping equipments

which are used mainly for the production,transportation of agricultural inputs and products were obtained through this survey.In obtaining information on assets reference period considered in respect of the following agricultural activities were as follows.

Cultivation of seasonal crops	----->	Previos two seasons
Cultivation of non seasonal crops	----->	Previous 12 calender months
Livestock/poultry/Bee keeping	----->	Previous calender month
Fishing,Fish breeding &related activities	----->	Previous calender month

Findings of the study

	No.in millions	As a percentage to the total assets
(1).Total number of assets used for agricultural activities	14.1	100.0
(2).Total number of assets owned	7.6	54.1
(3).Total number of assets used by borrowing (without making any payment)	3.8	26.9
(4).Total number of hired assets	2.7	19.0

Major type of assets used for agricultural activities by pattern of use is summerized in table 3.1a. According to this, total number of assets used for agricultural activities is estimated as .14.1 million. Out of this amount as many as 7.6 million or 54 % is owned and 3.8 million or 26.9 % of the assets were reported as used in agricultural activities by borrowing or other means (without making any payment). Only about 2.7 million or 19 % have been reported as hired. Further data reveals that most predominantly used major asset was Agricultural Implements Machinery and Tools which amounts to 11.57 million in number or 81.9 % of the total assets.

TABLE 3.1a - ASSETS USED FOR AGRICULTURAL ACTIVITIES BY PATTERN OF USE

(in million Rs.)

Type of Assets	Total	%	Owned	%	Hired	%	Borrowed & Other	%
Total	14.11	100.0	7.63	100.0	2.68	100.0	3.8	100.0
Animals	2.15	15.2	0.36	4.8	1.33	49.7	0.45	11.8
Implements, Machinery and Tools	11.57	81.9	7.03	92.1	1.19	44.6	3.33	87.8
Transport Equipments	0.38	2.7	0.21	2.8	0.15	5.7	0.01	0.3
Bee keeping Equipments	0.01	0.1	0.01	0.2	-	-	-	-

Chart 6
PERCENTAGE DISTRIBUTION OF ASSETS BY PATTERN OF USE

3.1.1 Implements machinery and tools used in agricultural activities

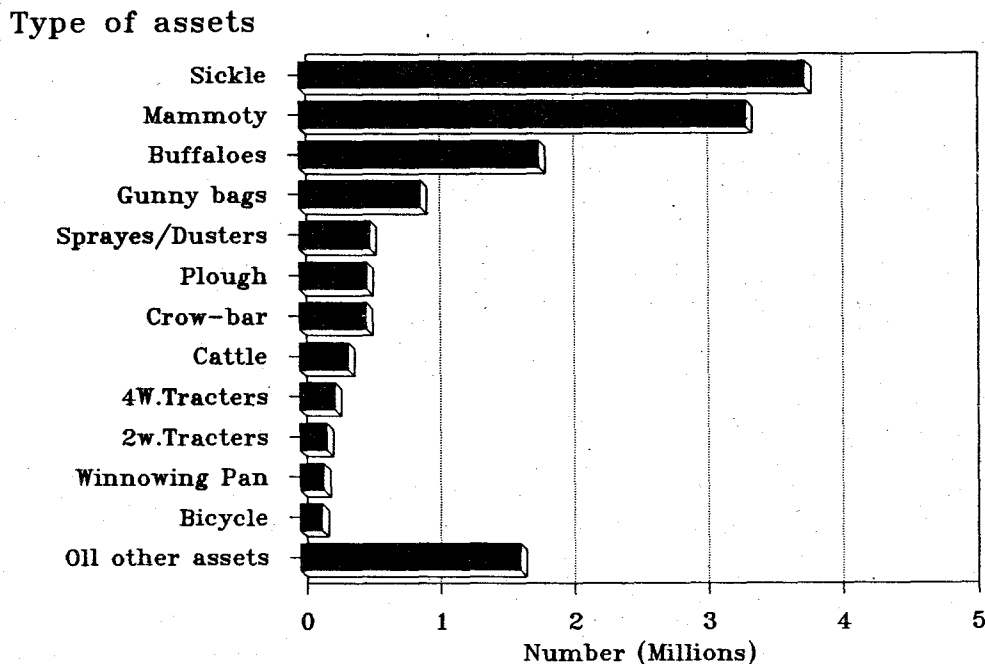

As available from survey data the Table 3.1b shows information on types of assets most commonly used by farmers. Sickle, Mamoty and Buffaloes represent higher proportions of 26.7 %, 23.6 % and 12.7 % of the total assets used in agricultural activities. However most popular mechanical implements such as 4.w Tractors, 2W.Tractors which are been used at various stages of farm operations represent only 1.9 % and 1.4 % respectively of the total number of assets.

The table further reveals that mamoty and ,sickle represent the highest proportions of owned assets which were found to be about 31.7 % and 23.9 % respectively of the total owned assets. In the case of hired assets used in agricultural activities Buffaloes represent the highest proportion of 42.3 % and sprayers/dusters represent the next highest proportion of 12.8 % of the total hired assets. Hiring of most commonly used implements in farming activities such as sickle and mamoties reported as very rear. Data reveals that these implements are usually borrowed by farmers without making payments in their requirements.

TABLE 3.1b - DISTRIBUTION OF SELECTED AGRICULTURAL IMPLEMENTS, MACHINERY AND TOOLS BY TYPE OF IMPLEMENTS AND PATTERN OF USE

Type of Assets	Total (No.)	%	Owned (No.)	%	Hired (No.)	%	Borrowed & Other (No.)	%
Total	14,118,475	100.0	7,636,190	100.0	2,684,586	100.0	3,797,699	100.0
Sickle	3,769,929	26.7	1,825,708	23.9	49,785	1.8	1,894,436	49.9
Mamoty	3,330,822	23.6	2,419,490	31.7	15,598	0.6	895,734	23.6

Chart 7
DISTRIBUTION OF ASSETS USED IN AGRICULTURAL ACTIVITIES

3.1.2 Sectoral distribution of assets

Table 3.1c shows the percentage distribution of the assets used in agricultural activities by type of major assets for sectors. Here it is seen that in both urban rural sectors more than 80 % of the total number of fixed assets used are agricultural machinery and tools. This component is much higher in urban sector (92.7 %) may be due to the fact that wide use of 4W/2W tractors in the urban sector due to the poor accessibility to farm animals like cattles and Buffaloes for various stages of farm operation activities. Quite a low proportion of farm animals used in urban sector when compared with this proportion for rural sector (15.6 %) is a clear evidence for the above fact.

TABLE 3.1c - ASSETS USED FOR AGRICULTURAL ACTIVITIES BY TYPE OF ASSETS FOR SECTORS

Type of Assets	All Island	%	Urban	%	Rural	%
Animals	2,150,808	15.2	27,985	6.0	2,122,823	15.6
Implements/mechanical tools	11,569,292	81.9	434,656	92.7	11,134,636	81.6
Transport Equipments	380,613	2.7	6,331	1.3	374,282	2.7
Other	17,762	0.1	0	0	17,762	0.1
Total	14,118,475	100.0	468,972	100.0	13,649,503	100.0

3.2 Inputs used in agricultural activities

For the purpose of this survey information on following main input categories

- (a).Seeds and breeding stock
- (b).Chemicals and chemical products
- (d).Animal poultry and fish feed
- (e).Fuel light and lubricant
- (f).Rent
- (g).Transport and travelling
- (h).Repairs and maintenance
- (i).Insurance and taxes
- (j).Communication
- (k).Miscellaneous

which were used for agricultural activities during the relevant reference period were collected. Values for inputs reported were based on the market value of inputs prevailed during the reference period. Table 3.2a gives the distribution of value of inputs used in agricultural activities by major input items.

TABLE 3.2a - VALUE OF INPUTS USED FOR AGRICULTURAL ACTIVITIES BY MAJOR INPUT ITEMS.

(In Millions)

Input item	Agricultural Activity					
	Crop Cultivation (per year)		Livestock & Poultry (per month)		Fishing (per month)	
	(Rs)	%	(Rs)	%	(Rs)	%
Total	3,191.3	100.0	81.4	100.0	31.1	100.0
Seeds & Breeding Stock	610.5	19.1	9.5	11.7	0	0
Chemical & Chemical products	1,337.7	41.9	2.8	3.4	0	0
Animal Poultry & Fish feed	0	0	64.4	79.1	.01	.04

Miscellaneous	26.7	0.8	0.5	0.6	1.5	4.9

Chart 8
DISTRIBUTION OF IMPUTS (VALUE) USED FOR EACH ACTIVITY

CROP CULTIVATION

LIVESTOCK & POULTRY

FISHING

Highlights of Table 3.2a

A. Total value of inputs used in crop cultivation per year	Rs. 3191.3 Million
Total value of inputs used for livestock and poultry per year	Rs. 976.8 Million
Total value of inputs used for fishing per year	Rs. 373.2 Million

B. Crop cultivation

Input Item	Expenditure incurred on inputs Rs./year (in millions)	As a percentage to the total value of inputs used
(a). Highest expenditure incurred is on fertilizer	1033.1	32.4 %
(b). Rent on land tractor & animals	682.1	21.4 %
(c). Seeds and seedlings	610.5	19.1 %
(d). Insecticides, pesticides weedicides & fungicides	304.6	9.5 %
(e). Maintenance and repairs	186.4	5.8 %
(f). Other expenses	374.5	11.8 %

C. Livestock and poultry

Input Item	Expenditure incurred Rs./month (in millions)	As a percentage to the total value of inputs used in livestock & poultry
(a). Highest expenditure incurred is on animal poultry and fish feed	64.4	79.1 %
(b). Breeding stock	9.5	11.7 %
(c). Drugs, other pharmaceuticals	1.5	1.9 %
(d). Other expenses	5.9	7.3 %

D.Fishing

	Value of inputs Rs./month (in millions)	as a percentage to the value of inputs used in fishing
(a). Highest expenditure incurred is on maintenance of vehicles boats and nets	13.5	43.4 %
(b). Expenditure incurred on Petrol, diesel, kerosene oil engine oil, electricity & torch batteries	12.6	40.7 %
(c). Other expenses on rent, taxes, etc	4.9	15.9 %

TABLE 3.2b - VALUE OF INPUTS USED IN AGRICULTURAL ACTIVITIES BY SECTORS

Sector	Crop Cultivation (per year)		Livestock & Poultry (per month)		Fishing (per month)	
	Value	%	Value	%	Value	%
All Island	3,191.3	100.0	81.4	100.0	31.0	100.0
Urban	96.4	3.0	4.7	5.8	14.1	45.5
Rural	3,094.9	97.0	76.7	94.2	16.9	54.5

Sector wise classification of inputs used in agricultural activities are shown in table 3.2b. This shows that when inputs used for crop cultivation and livestock keeping are considered more than 94% of the inputs used in each activity was consumed by rural sector. This is a clear indication of crop cultivation, livestock and poultry keeping activities are more concentrated in rural areas than in urban areas. But the situation is different in the case of fishing. When total value of inputs used in fishing is considered not much significant variation is observed between the sectors. Urban sector used about 45% of the total fishing inputs while rural sector used 55% of the total fishing inputs.

TABLE 3.2c - PERCENTAGE DISTRIBUTION OF INPUTS USED IN AGRICULTURAL ACTIVITIES BY MAJOR INPUT GROUP FOR SECTORS

Input Group	All Island			Urban			Rural		
	Crop Cultivation	Livestock	Fishing	Crop Cultivation	Livestock	Fishing	Crop Cultivation	Livestock	Fishing
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Seeds & Breeding Stock	19.1	11.7	0.0	14.7	29.6	0.0	19.3	10.6	0.0
Chemical & Chemical Product	41.9	3.5	0.0	37.7	0.9	0.0	42.1	3.6	0.0
Animal Poultry & Fish feed	0.0	79.0	0.1	0.0	64.8	0.0	0.0	80.0	0.1
Fuel Light & Lubricant	1.5	2.9	40.7	0.9	0.3	43.4	1.5	3.1	38.4
Rent	21.4	0.2	9.9	27.7	0.3	10.4	21.2	0.2	9.6
Transport & Travelling	2.8	1.1	0.0	4.5	0.6	0.0	2.7	1.1	0.0
Repairs & Maintenance	5.8	1.0	43.4	11.1	3.0	36.1	5.7	0.8	49.5
Insurance & Taxes	6.6	0.0	1.0	3.0	0.5	0.3	6.7	0.0	1.6
Communication	0.0	0.0	0.0	0.1	0.0	0.0	0.0	0.0	0.0
Miscellaneous	0.8	0.6	4.9	0.3	0.0	9.8	0.8	0.6	0.8

Table.3.2c gives a sectoral classification of percentage of inputs used in agricultural activities by major input groups. This table reveals that with regard to crop cultivation in both rural and urban sectors highest expenditure incurred was on Fertilizer, Insecticides, Weedicides and Fungicides. In the case of rural sector it is (1301.4 million) or 42.1% of the total value of inputs used in crop cultivation. In the case of urban sector it is (36.3 millions) or 37.7%

In livestock and poultry keeping in both urban and rural sectors highest expenditure incurred was on animal and poultry feeds, which is about (61.3 million) or 80 % of the total value of inputs used for livestock and poultry keeping in the case of rural sector. In urban sector these figures under the same criterion is about (3.0 million) or 64.8 %. But in the case of fishing in urban sector highest expenditure incurred was on fuel light and lubricant, which is about (6.1 million) or 43.4 % of the total value of inputs used in fishing. But quite different picture is observed in the case of fishing in rural sector. Here the highest expenditure worth of (8.3 million) or 49.5 % of the total value of inputs used in fishing in rural sector was incurred on Repairs and Maintenance of boats, nets etc. this infers that using of mechanised boats are more dominant in urban fishing areas.

3.3 Output and Sales

Information on output and sales were collected under the following sub categories in the following manner.

1. Seasonal Crops (Excluding home gardens)
2. Non Seasonal Crops (Excluding home gardens)
3. Livestock and Poultry (Including home gardens)
4. Fishing and Fish Breeding (Including home gardens)

It should also be noted that information on output and sales are based on the following presumptions.

(a). Output was considered to be the total production of crops/Livestock & Poultry/Fish produced by the members of the household during the relevant reference period.

(b). Sales refers to the total sales effected by the household during the reference period. As such quantities sold during the reference period may include savings of produce from the previous seasons too.

(c). Quantities consumed during the reference period may also include savings of produce from previous seasons too.

(d). Same criterion is adopted for the stocks as at date.

3.3.1 Seasonal Crops

Table 3.3a shows the distribution of output and sales under three major categories of seasonal crops. This shows that contribution of paddy to the total output value is highest among the three categories of the crops under consideration. This value is reported to be 94 %. Whereas contribution of other seasonal crops were found to be very low as 3 %. Same Pattern is observed in the case of sales value of these crops.

TABLE 3.3a - DISTRIBUTION OF THE VALUE OF OUTPUT AND SALES BY TYPE OF CROP (SEASONAL) PER YEAR

(in Rs.Thousand)				
Type of Crop	Value of out put (Rs.)	%	Value of sales (Rs.)	%
Total	32,038,726	100.0	15,095,882	100.0
Paddy	30,119,029	94.0	14,013,962	92.8
Food crops	803,254	2.5	607,516	4.0
Other crops	1,116,343	3.5	474,404	3.1

their household consumption is highest for paddy, than any other crop which is about 22 %, and around 50 % of the paddy output is sold out during a cultivation year. About 10 % is given out for repayment of loans taken from land lords and other sources etc. when other seasonal crops are considered amount retained by farmers for household consumption is comparatively low. But a higher proportion as much as 75 % is sold out. Amount given out for repayment of loans, other, and etc is reported as 8 %.

In the case of non seasonal economic crops proportion utilized for household consumption is negligibly small, except for minor export crops entire output of Tea, Rubber, and Coconut is sold out.

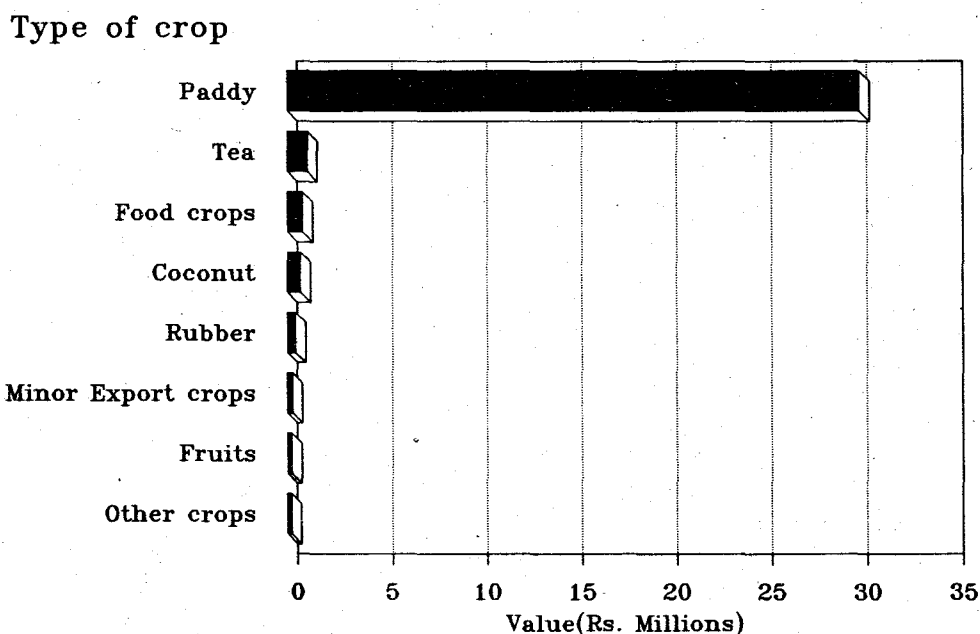

3.3.2 Non Seasonal Crops

Table 3.3b shows that Tea, Rubber & Coconut taken as a whole contribute about 80 % to the total value of non seasonal crop output. Balance 20 % comprises Minor Export Crops, Fruits and Other crops. When sales value of each crop is studied same pattern is observed. But the contribution of Tea, Rubber and Coconut to the total value of sales was found to be higher than the contribution of the same crops to the total output value.

TABLE 3.3b - DISTRIBUTION OF THE VALUE OF OUTPUT AND SALES BY TYPE OF CROP (NON SEASONAL) PER YEAR

Type of Crop	Value of out put(Rs.)	%	Value of sales(Rs.)	%
Total	2,745,626	100.0	2,458,755	100.0
Tea	1,055,357	38.4	1,060,267	43.1
Rubber	428,463	15.6	428,392	17.4
Coconut	702,603	25.6	632,558	25.7
Minor Export Crops	264,441	9.6	151,777	6.2
Fruits	208,657	7.6	99,426	4.0
Other	86,105	3.1	86,335	3.5

Chart 9
VALUE OF OUTPUT BY TYPE OF CROP (PER YEAR)

3.3.3 Distribution Pattern of Output

Tables 3.3c and 3.3d show the distribution pattern of agricultural output of seasonal and non seasonal crops respectively. Here it is important to note that, total of all the components under the distribution of output, for each type of crop, will not additive to total output of each crop. As such percentage of each component to the total output of each crop is shown in the tables in order to get an idea of the size measure of each component in respect of a cultivation year relative to the output.

TABLE 3.3c - DISTRIBUTION PATTERN OF THE OUT PUT BY TYPE OF CROP (SEASONAL CROPS)
(QUANTITY IN KG. '000')

(Quantity in kg. "000")

Type of Crop	Output Qty	Household Consumption Qty	%	Repayment to loans & etc Qty	%	Sales Qty	%	Other Qty	%
Paddy	1,789,604	400,710	22.4	173,270	9.7	832,659	46.5	232,648	13.0
Foods Crops	157,702	17,127	10.9	12,426	7.9	122,130	77.4	33,726	21.4
Other Crops	89,420	1,529	1.7	904	1.0	65,528	78.3	48,976	54.6

TABLE 3.3d - DISTRIBUTION PATTERN OF THE OUTPUT BY TYPE OF CROP (NON SEASONAL CROPS)
(QUANTITY IN KG. '000')

(Quantity in kg. 000)

Type of Crops	Output Qty	Household consumption Qty	%	Repayment to loans & etc Qty	%	Sales Qty	%	Other Qty	%
Tea	214,940	81	0.03	49	0.02	215,931	100.5	81	0.04
Rubber	24,264	74	0.30	829	3.40	24,254	99.9	390	1.60
Coconut	337,790	18,738	5.50	6,246	1.80	303,468	89.8	527	0.20
Minor Export Crops	28,418	814	2.90	2,347	8.30	17,312	60.9	156	0.50
Other Crops	602,503	1,750	6.30	2,102	0.30	578,985	98.1	27	0.00

In this context it is observed that under seasonal crops proportion retained by the farmers during a cultivation year for their household consumption is highest for paddy, than any other crop which is about 22 %, and around 50 % of the paddy output is sold out during a cultivation year. About 10 % is given out for repayment of loans taken from land lords and other sources etc. when other seasonal crops are considered amount retained by farmers for household consumption is comparatively low. But a higher proportion as much as 75 % is sold out. Amount given out for repayment of loans, other, and etc is reported as 8 %.

In the case of non seasonal economic crops proportion utilized for household consumption is negligibly small except for minor export crops entire output of Tea, Rubber, and Coconut is sold out.

4. INCOME, LOANS AND SUBSIDIES TAKEN

4.1 Income of Agricultural Households

There were 1.5 million agricultural households in the island during 1988/89. During the reference period 2.6 percent of the households did not receive income from any source while 8.8 percent of the households were depending solely on agricultural income. When comparing the agricultural income to the total income of the household as a ratio, 42.2 percent of the households received an income from agriculture which is less than 1/4 th of the total household income. In the urban sector this percentage was 73.0 and in rural sector it was 40.4 percent. Households which earned an income from agriculture ranging from half to the full (total) income of the household ($I \geq 1/2$) was 26.3 percent. In this income group sectorwise percentages were 10.0 in the urban sector and 27.2 in the rural sector.

NO OF HOUSEHOLDS CLASSIFIED ACCORDING TO THE RATIO OF THE INCOME RECEIVED FROM AGRICULTURAL ACTIVITIES TO THAT OF TOTAL INCOME BY SECTOR

RATIO OF INCOME	ALL ISLAND		URBAN		RURAL	
	NUMBER OF HOUSEHOLDS	%	NUMBER OF HOUSEHOLDS	%	NUMBER OF HOUSEHOLDS	%
	NO INCOME	37601	2.55	1586	1.96	36015
LESS THAN 1/4 OF TOTAL	621364	42.18	58842	73.03	562522	40.40
1/4 AND LESS THAN 1/2	297445	20.19	7230	8.97	290215	20.84
1/2 AND LESS THAN 3/4	209345	14.21	6094	7.56	203251	14.59
3/4 AND LESS THAN 1	177433	12.04	1999	2.48	175434	12.60
INCOME FROM AGRI. ACTI.	129700	8.8	4815	5.97	124885	8.96
TOTAL	1472888	100.00	80566	100.00	1392322	100.00

Chart 10
 DISTRIBUTION OF H/H ACCORDING TO THE RATIO OF THE
 INCOME RECEIVED FROM AGRICULTURAL ACTIVITIES

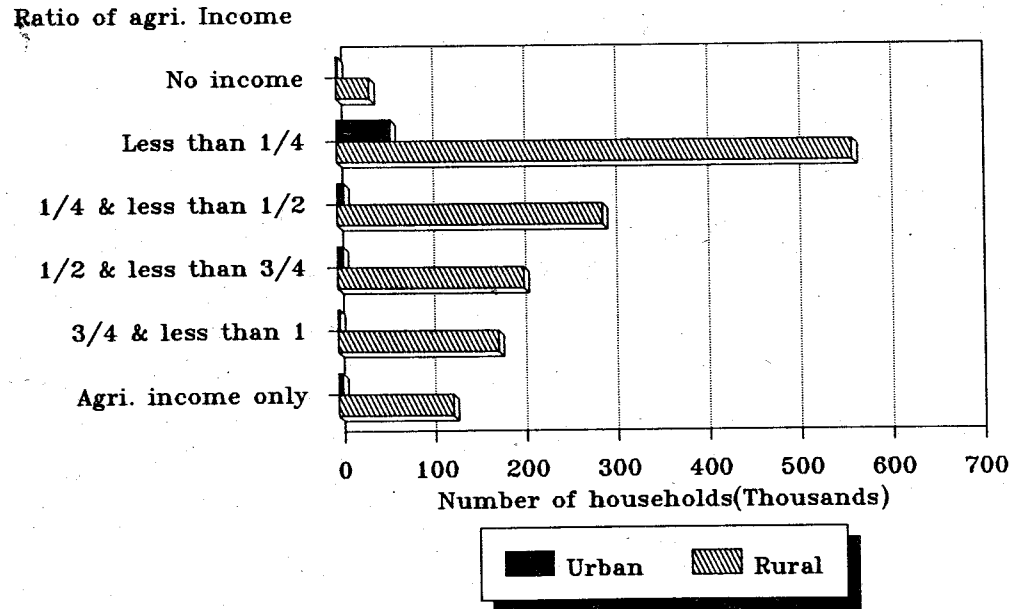

Chart 11
 DISTRIBUTION OF H/H ACCORDING TO THE RATIO OF THE INCOME
 RECEIVED FROM AGRICULTURAL ACTIVITIES

4.2 Loans and Subsidies taken

The survey covered a section on loans and subsidies taken from public as well as private institutions on agricultural purposes during the year. It also attempted to collect amounts repaid during that year on agricultural purposes.

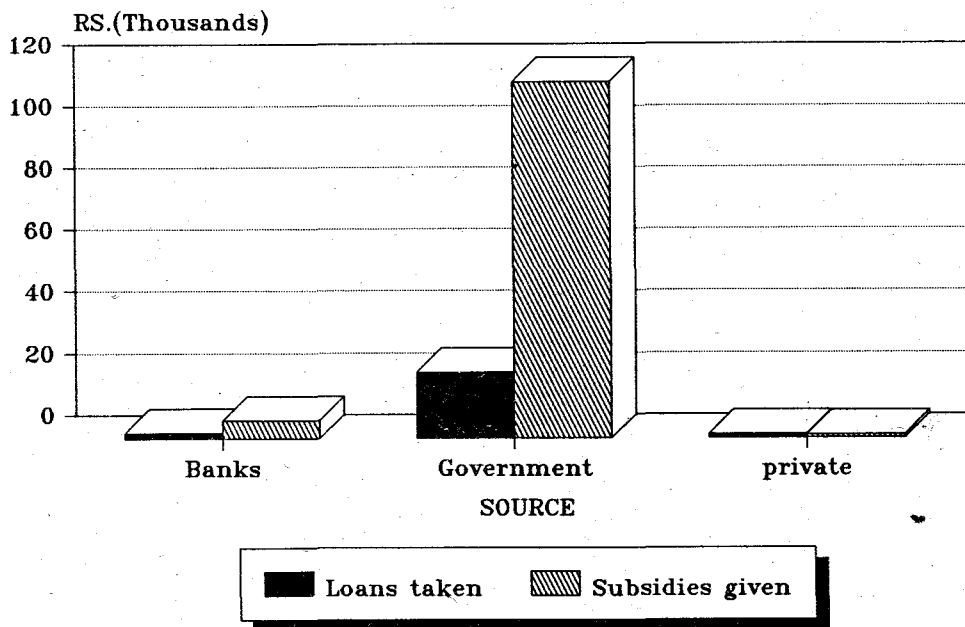

Table.22 shows the loans taken from Banks, and Government separately and all the other lenders under 'Other' by agricultural activity. Thirty percent of the loans were taken for three major cash crops while 29% had been borrowed for fishing and fish breeding activities. 21% of loans being used by the farmers who were engaged in paddy cultivation.

The government stands as the number one lender, percent being 86.3.

The loans repaid during the year was 41.8 percent of the total loans taken for that year.

Major portion of the subsidies were taken for rubber and tea plantation, percentages being 43.3 and 22.5 respectively.

Chart 12
LOANS TAKEN & SUBSIDIES GIVEN FOR AGRICULTURAL
ACTIVITIES BY SOURCE

5. AGRICULTURAL LABOURERS

Information collected in Section 1 of the schedule identifies persons who are working as agricultural labourers in seasonal crop cultivation, non-seasonal crop cultivation, livestock, poultry, bee-keeping, fishing and fish breeding. If these agricultural labourers were engaged in non-agricultural activities such information is also collected in respect of them.

Male agricultural labourers were highest in the Western Province (24%) and the second highest was the Southern Province (21%). When considering the districts Galle had the highest percent of males as well as females engaged as agricultural labourers, percentages being 15.2 and 19.1 respectively. Larger number of male labourers were in age groups (20-24) and (25-29) and female labourers were in age groups (35-39) and (40-44).

5.1 Average daily wages

Out of the total number of persons engaged in Agricultural activities as labourers 66.5 percent were males while 33.5 percent were females. 56.6 percent of males earned an average daily wage within the wage group Rs. (20-29) while 77.9 percent of total women labourers were also in the same wage group as males.

Least number of males recorded was in the Rs. (120 and over) wage group but for females it was Rs.(80-99) wage group, percentages being .01 and .03 respectively.

The districts where labourers in agricultural activities earned an average daily wage more than Rs. 100.00 were very few namely Kalutara, Galle, Amapra, Puttalam and Ratnapura. These districts consisted only .17 percent of the total number of labourers in the island (excluding Northern and Eastern Provinces).

5.2 Number of days worked

The days worked by agricultural labourers are given under seasonal crop cultivation, non-seasonal crop cultivation, livestock, poultry, bee keeping and fishing activities. Number of days are classified into four groups viz. (1-7), (8-14) (15-21) and (22-30) days.

In seasonal crop cultivation 48% males and 49% of females were in the 1st group where they have worked upto 7 days.

Only 3% of males and 3% of females have preferred to work for 22-30 days. This shows that the pattern of working, duration wise is very much similar between males and females.

Highest number of males engaged in seasonal crop cultivation were in the North-Central Province while for females, it was the North Western Province.

In non-seasonal crop cultivations higher percent of males (36.4%) as well as females (37.7%) have worked longer days (15-21) days than those who were engaged in seasonal crop cultivation.

Among the male labourers who were engaged in livestock poultry, bee keeping and fishing activities 45.5% had worked (15-21) days. 76.8 percent of female labourers had also worked (15-21) days as males.
