Overview

ABSTRACT

This survey provides information on household income and expenditure leading to measure the levels and changes of the living conditions of the people and to observe the consumption patterns .

Key objectives of the survey

- To identify the income patterns in Urban, Rural and Estate Sectors & provinces.
- To identify the income patterns by income levels.
- Average consumption of food items and non food items
- Expenditure patterns by sector and by income level.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Household, Individuals

Scope

NOTES

The scope of HIES 2005 includes the following key sections:-

- 1). Demographic characteristics
- 2). Income
- 3). Expenditure

Identification and Demographic Information

- Address
- Province
- District

- D.S. Division
- Name of MC/UC
- G. N. Division
- Name of Village
- Name of Estate
- C.B. No & SSU No.
- Sample Stratum
- Survey Month
- Number of households
- Name of the Head of the household
- Interviewer's & Supervising Office
- Demographic Characteristics

Expenditure

- Daily consumption on Food, Drink and Tobacco

(Cereals, Prepared foods, Pulses, Vegetables, Leafy Vegetables, Yams & other, Meat, Fish, Dried fish, Eggs, Coconuts, Condiments, Other foods, Milk and milk foods, Fats and Oils, Sugar, Juggery and Treacle, Dried foods, Canned Fruits, Confectioner and Short eats, Beverages-Non alcoholic, Liquor, Drugs and Tobacco)

Sampling

Sampling Procedure

A two stage stratified random sample design was used in the survey. Urban, Rural and Estate sectors of the Districts were the domains for stratification. The sample frame was the list of buildings that were prepared for the Census of Population and Housing 2001.

Selection of Primary Sampling Units (PSU's)

Primary sampling units are the census blocks prepared for the Census of Population and Housing - 2001. The sample frame, which is a collection of all census blocks in the domain, was used for the selection of primary sampling units. A sample of 500 primary sampling units was selected from the sampling frame for the survey.

Selection of Secondary Sampling Units (SSU's)

Secondary Sampling Units are the housing units in the selected 500 primary sampling units (census blocks). From each primary sampling unit 10 housing units (SSU) were selected for the survey. The total sample size of 5000 housing units was selected and distributed among Districts in Sri Lanka.

Questionnaires

Overview

Questionnaires

The survey schedule was designed to collect data by household and separate schedules were used for each household identified according to the definition of the household within the housing units selected for the survey. The survey schedule consists three main sections .

1. Demographic section
2. Expenditure
3. Income

The Demographic characteristics and usual activities of the inmates belonging to the household were reported in the Demographic section of the schedule (and close relatives temporarily living away are also listed in this section). Expenditure section has two sub sections to report food and non-food consumption data separately. Expenditure incurred on their own decisions by boarders and servants are recorded in the sub section under the Main expenditure section. The income has seven sub sections categorized according to the main sources of income.

DATA COLLECTION NOTES

Field data Collection

Data collection in the field was done by the statistical officers attached to the Divisional Secretariats in the Districts. The allocated number of blocks to the District that is to be surveyed in the month was equally distributed among the available weeks of the month. A fresh listing of total housing units belonging to the block was done one month before the survey was conducted and the selection of the SSU's were made from this updated list. The data collection was done in three visits made. Eg. on Monday the Demographic and Income related data were collected on the survey schedule and the members of the households were educated about recording the figures of consumption took place within the week. A separate sheet was provided for this purpose to be filled by the members of the households. A second visit was made in the mid of the week to supervise the householders' reporting work. The report was collected back after making the necessary corrections in the third visit made on the following Sunday.

SUPERVISION

A group of statistical officers (Field Officers) were supervised by District Staff officers (Statisticians, Deputy Directors) and the statisticians attached to the Sample Survey Division of DCS.

Data Processing

Other Processing

Data was processed in district -wise batches and stored in separate files.

Data processing included the following steps.

1. Counting and accepting the filled questionnaires by the DP Division
2. Do a visual check for completeness
3. Preliminary editing and marking codes
4. Entry of data
5. Run edit program for each District batch
6. Produce error report and return to the Survey office
7. Correction of errors on the report
8. Change incorrect data using the corrected error report
9. Re-run the edit program and repeat the error correction procedure
10. Produce final report on clean data with a backup of clean data.
11. Combining all District files to form the Master file
11. Re-coding of variables needed for analysis and update the file with sample weights
13. Tabulations

Data Appraisal

Estimates of Sampling Error

The exact differences or sampling error ,varies depending on the particular sample selected and the variability is measured by the standard error of the estimate. There is about a 95% chance or level of confidence that an estimate based on a sample will differ by no more than 1.96 standard errors from the true population value because of sampling error. Analyses relating to the HIES are generally conducted at the 95% level of confidence .

confidence interval = Estimate value (standard error)*(1.96)
