## P R E F A C E

This publication contains statistics of physically disabled persons enumerated at the 1981 Census of Population. 1981 has been declared the Year of the Disabled by the United Nations and therefore, priority was given to the tabulation of information collected at the Census on physically disabled persons for early release of this information. As the tabulation was done on our computer, printing by the photo off-set process directly from the tables produced by the computer enabled this publication to be released so early. I have no doubt that this statistical tabulation will be of considerable use to planners, policy makers, social workers and others dealing with problems concerning disabled persons.

02. Information on physical disability was not collected in the 1971 Census, although it had been collected in the earlier Censuses. This subject was re-introduced at the last Census as 1981 was declared the Year of the Disabled and also due to a special request from the Ministry of Social Services. However, questions had to be limited on physical disability and was not extended to cover mental disabilities as it was difficult to obtain this information at a Population Census.

03. Section I of this publication contains tables showing the districtwise distribution of the disabled persons while section 2 contains detailed cross-classifications of the disabled persons for the three sectors by age, cause etc. Although the detailed cross-classifications have been made at the district level as well, these are not being published on account of high costs.

## INTRODUCTION

### General:

At the 1981 Census of Population and Housing the information relating to physical disabilities was collected during the Preliminary Census taken during the period 1st - 10th March, 1981. A special "Physical Infirmary Schedule" was used to record the information. This schedule is reproduced in the Appendix.

For the purpose of the Census, totally blind, totally deaf and/or dumb persons and persons with a disability in one or more legs or arms were regarded as physically disabled. The coverage of physical disabilities at the 1981 Census was broader in scope than at the 1946 and 1963 Censuses at which only the totally blind, deaf-mutes and the crippled in both legs were included as disabled. Information on physical disabilities was not collected at the 1971 Census.

The purpose of this introduction is to highlight some major characteristics of the disabled persons and make a brief comparative analysis with the 1946 and 1963 Census statistics on the physically disabled.

### The Blind

Only persons who were totally blind were regarded as physically disabled and enumerated as blind. Persons with blindness in one eye or defective sight were not regarded as blind. In 1981 there were 9,331 blind persons as against 10,341 in 1963 and 4,602 in 1946.

TABLE I : BLIND PERSONS BY VARIOUS SUMMARY CHARACTERISTICS, 1946, 1963 & 1981 CENSUSES

|                                | 1946  | 1963   | 1981  |
|--------------------------------|-------|--------|-------|
| Number blind                   | 4,602 | 10,341 | 9,331 |
| Rate per 10,000 Population     | 7     | 10     | 6.3   |
| Percent blind from birth       | 22    | 20     | 33.0  |
| Percent blind by age 15        | 58    | 46     | 60.8  |
| Percent blind due to disease   | 63    | 49     | 32.9  |
| Percent blind aged 60 and Over | 31    | 40     | 34.0  |

The incidence of blindness shows a decline from a rate of 10 per 10,000 population in 1963 to 6 per 10,000 in 1981. However, the percentage reported as blind from birth is 33% in 1981 while it was only 20% in 1963. On the other hand the percentage blind due to disease has declined from 49% in 1963 to 33% in 1981.

754 or 8% of all the blind were reported as living in an institution and of these a large majority (84%) were supported by the institution. 8,577 (or 92%) of the blind persons were living with their families or elsewhere and the large majority of these (79%) were supported by their families or relations. Only 496 (5.8%) of these had employment as their means of livelihood.

#### The Deaf, Dumb and Deaf-mute

At the 1981 Census 3,459 persons were reported as deaf, 11,845 as dumb and 9341 as deaf-mute (deaf and dumb). In the 1963 and 1946 Censuses only the deaf-mute were taken as disabled. Hence comparison with the earlier Census figures is only possible for the deaf-mute.

TABLE II : DEAF-MUTES BY VARIOUS SUMMARY CHARACTERISTICS, 1946, 1963 AND 1981 CENSUSES

|                                  | 1946  | 1963  | 1981  |
|----------------------------------|-------|-------|-------|
| Number Deaf-mute                 | 3,123 | 9,356 | 9,341 |
| Rate per 10,000 population       | 5     | 9     | 6.3   |
| Percent deaf-mute from birth     | 91    | 84    | 92.4  |
| Percent deaf-mute by age 15      | 97    | 93    | 97.2  |
| Percent deaf-mute due to disease | 7     | 9     | 3.3   |
| Percent aged 60 years and over   |       | 5.9   | 4.6   |

The incidence rate of the deaf-mute in 1981 was 6.3 per 10,000 and is low compared to the 1963 Census figure of 9 per 10,000 but higher than the 1946 figure of 5 per 10,000. It may be possible that in 1963 some persons who were only deaf or only dumb were included as deaf and dumb.

92.4% of the deaf-mute were \$0 from birth and only 3.3% became deaf and dumb due to disease. This is in accord with the fact that deaf-mutism is largely a congenital defect.

Among the deaf persons, 45% were deaf since birth while 88% of the dumb were \$0 from birth.

TABLE III : DEAF, DUMB AND DEAF-MUTE PERSONS BY VARIOUS SUMMARY CHARACTERISTICS  
1981 CENSUS

|                                 | Deaf  | Dumb   | Deaf-Mute |
|---------------------------------|-------|--------|-----------|
| Number                          | 3,459 | 11,845 | 9,341     |
| Rate per 10,000                 | 2.3   | 8.0    | 6.3       |
| Percent disabled from birth     | 44.8  | 88.4   | 92.3      |
| Percent disabled by age 15      | 15.9  | 36.5   | 32.2      |
| Percent disabled due to disease | 21.4  | 5.3    | 3.3       |
| Percent aged 60 and over        | 29.5  | 3.8    | 4.8       |

The incidence of dumbness (8.0 per 10,000) and deaf-mutism (6.3 per 10,000) is much higher than the incidence of mere deafness (2.3 per 10,000).

Close to 90% of both dumb and deaf-mute persons were so from birth while only 45% of deaf persons were born deaf. The high percentage (29.5%) of deaf persons aged 60 and over compared to those above this age who are dumb (3.8%) or deaf-mute (4.8%) is probably because many old people have become deaf due to disease.

Disease accounts for 21.4% of the deaf becoming so while it is insignificant as a factor in causing dumbness or deaf-mutism.

92.4% of the deaf-mute were \$0 from birth and only 3.3% became deaf and dumb due to disease. This is in accord with the fact that deaf-mutism is largely a congenital defect.

Among the deaf persons, 45% were deaf since birth while 88% of the dumb were \$0 from birth.

TABLE III : DEAF, DUMB AND DEAF-MUTE PERSONS BY VARIOUS SUMMARY CHARACTERISTICS  
1981 CENSUS

|                                 | Deaf  | Dumb   | Deaf-Mute |
|---------------------------------|-------|--------|-----------|
| Number                          | 3,459 | 11,845 | 9,341     |
| Rate per 10,000                 | 2.3   | 8.0    | 6.3       |
| Percent disabled from birth     | 44.8  | 88.4   | 92.3      |
| Percent disabled by age 15      | 15.9  | 36.5   | 32.2      |
| Percent disabled due to disease | 21.4  | 5.3    | 3.3       |
| Percent aged 60 and over        | 29.5  | 3.8    | 4.8       |

The incidence of dumbness (8.0 per 10,000) and deaf-mutism (6.3 per 10,000) is much higher than the incidence of mere deafness (2.3 per 10,000).

Close to 90% of both dumb and deaf-mute persons were so from birth while only 45% of deaf persons were born deaf. The high percentage (29.5%) of deaf persons aged 60 and over compared to those above this age who are dumb (3.8%) or deaf-mute (4.8%) is probably because many old people have become deaf due to disease.

Disease accounts for 21.4% of the deaf becoming so while it is insignificant as a factor in causing dumbness or deaf-mutism.

The Disabled in Hands

TABLE IV : THE DISABLED IN HANDS BY TYPE OF DISABILITY AND VARIOUS CHARACTERISTICS - 1981 CENSUS

|                                  | One Hand |           | Both Hands |           | Total  |
|----------------------------------|----------|-----------|------------|-----------|--------|
|                                  | Loss     | Paralysis | Loss       | Paralysis |        |
| Number                           | 1 1,708  | 7,571     | 204        | 4,081     | 13,564 |
| Percentage                       | 12.6     | 55.8      | 1.5        | 30.1      | 100.0  |
| Percent disabled from birth      | 19.8     | 26.8      | 43.1       | 52.3      | 33.8   |
| Percent disabled by age 15       | 43.3     | 57.1      | 61.3       | 72.3      | 59.9   |
| Percent disabled due to disease  | 10.2     | 36.3      | 17.2       | 22.9      | 28.7   |
| Percent disabled due to accident | 48.7     | 14.6      | 14.7       | 5.2       | 16.0   |
| Percent aged 60 years and over   | 18.0     | 25.6      | 17.9       | 14.5      | 21.2   |

A hand was considered lost if the part below the elbow was missing. Loss of fingers was not considered as loss of hand. BY paralysis was meant complete inactivity of the hand. A weakness in a hand was not regarded as paralysis.

Of the 13,564 persons with disability in hands 204 or 1.5% suffered from loss of both hands while 4,081 or 30.1% had both hands paralysed.

42.6 percent of those with loss of both hands were afflicted from birth while 52.3% of those paralysis of both hands had this disability from birth. In the case of loss or paralysis of one hand the percentage afflicted from birth was much less with 19.8% in the case of loss of one hand and 26.8% in the case of paralysis of one hand.

Accident was a major cause only in the case of loss of one hand with 48.7% such cases being due to accidents.

The Disabled in Legs

TABLE V : THE DISABLED IN LEGS BY TYPE OF DISABILITY AND VARIOUS CHARACTERISTICS - 1981 CENSUS

|                                | One Leg |           | Both Legs |           | Total  |
|--------------------------------|---------|-----------|-----------|-----------|--------|
|                                | Loss    | Paralysis | Loss      | Paralysis |        |
| Number                         | 2,832   | 11,062    | 646       | 11,033    | 25,573 |
| Percentage                     | 11.1    | 43.3      | 2.5       | 43.1      | 100.0  |
| Percent disabled from birth    | 10.0    | 30.4      | 34.8      | 50.8      | 37.1   |
| Percent disabled by age 15     | 32.8    | 64.1      | 58.3      | 74.7      | 65.1   |
| Percent disabled disease       | 29.5    | 36.3      | 29.6      | 26.2      | 31.0   |
| Percent disabled accident      | 43.6    | 15.7      | 18.4      | 8.2       | 15.6   |
| Percent aged 60 years and over | 23.9    | 20.6      | 14.7      | 14.5      | 18.3   |

A leg was considered lost if the part below the knee was missing. This includes the case of loss of the whole limb including the knee. Among the disabled the large majority suffered from paralysis of one or both legs. The percentage with paralysis in one leg was 43.3 while those with paralysis of both legs was 43.1.

646 persons or 2.5% of the disabled in legs suffered loss of both legs while 2,832 or 11.1% suffered loss of one leg.

The major cause of loss of one leg was accidents (43.6%) followed by disease (29.5%). In the case of paralysis of one leg the major cause was disease (36.3%) followed by disability at birth. (30.4%)

In the case of loss of both legs, 34.8% were disabled at birth while 29.6 percent lost both legs due to disease. Accidents were responsible for loss of both legs in only 18.4% of the cases.

50.8% of the persons paralysed in both legs were born with this condition while 26.2% became so due to disease.

At the 1946 and 1963 Censuses only the crippled in both legs were included under the physically disabled. The physically disabled persons reported with loss or paralysis of both legs in 1981 may be taken as comparable to the crippled in both legs. Table VI below gives the comparative figures.

TABLE VI : THE CRIPPLED IN BOTH LEGS BY VARIOUS CHARACTERISTICS 1946, 1963 AND 1981 CENSUSES

|                                 | 1946  | 1963  | 1981   |
|---------------------------------|-------|-------|--------|
| Number                          | 3,259 | 8,804 | 11,679 |
| Rate per 10,000 population      | 5     | 8     | 7.9    |
| Percent crippled from birth     | 36    | 37    | 49.9   |
| Percent crippled by age 15      | 65    | 67    | 73.7   |
| Percent crippled due to disease | 45    | 45    | 26.4   |

The rate of incidence of crippling in both legs in 1981 is almost the same as in 1963. However, the percentage crippled from birth is higher in 1981 with 50% compared to 37% in 1963 and 36% in 1946. On the other hand the percentage crippled due to disease is lower in 1981 with 26.4% compared to 45% in both 1946 and 1963.

#### Multiple Disabilities

In the above analysis the different types of disabilities have been considered taking a person suffering from any one of the disabilities e.g. blindness, as one physically disabled person. A person suffering from more than one disability say blindness and loss of one hand would have been included in the table on blind persons and again in the table on the disabled in hands. Hence, adding all the blind, deaf, dumb, deaf-mute, disabled in hands and disabled in legs would yield a figure somewhat higher than the actual number of disabled persons with one or more of the specified disabilities. In this section we consider persons with multiple disabilities.

The total number of disabled with one or more of the disabilities under consideration but excluding any minor disabilities was 61,824. Of these 9,659 or 15.6 percent had more than one disability.

Of the 33,976 blind, deaf, dumb and deaf-mute persons 30,716 (90.4%) were free of any disability in hands or legs. The distribution of the 3,260 (9.6%) who had additional disabilities is shown in Table VII below.

TABLE VII : BLIND, DEAF, DUMB, AND DEAF-MUTE PERSONS WITH AN ADDITIONAL  
DISABILITY BY TYPE OF ADDITIONAL DISABILITY.

|           | Disability in<br>Hands | Disability in<br>Legs | Total |
|-----------|------------------------|-----------------------|-------|
| Blind     | 253                    | 230                   | 483   |
| Deaf      | 143                    | 107                   | 250   |
| Dumb      | 1,174                  | 613                   | 1,787 |
| Deaf-Mute | 511                    | 229                   | 740   |
|           | 2,081                  | 1,179                 | 3,260 |

It is also found that 6,399 persons had disabilities in both hands and legs. Table VIII shows a cross-classification of such persons by type of disability.

TABLE VIII : PERSONS DISABLED IN HANDS AND LEGS BY TYPE OF DISABILITY IN  
HANDS AND TYPE OF DISABILITY IN LEGS

| Disabled in Hands       | Disability in Legs |                            |                      |                              | Total |
|-------------------------|--------------------|----------------------------|----------------------|------------------------------|-------|
|                         | Loss of<br>One Leg | Paralysis<br>of<br>One Leg | Loss of<br>Both Legs | Paralysis<br>of<br>Both Legs |       |
| Loss of one hand        | 154                | 43                         | 11                   | 19                           | 227   |
| Paralysis of one hand   | 58                 | 3,499                      | 20                   | 353                          | 3,930 |
| Loss of both hands      | 7                  | 10                         | 53                   | 19                           | 59    |
| Paralysis of both hands | 11                 | 118                        | 28                   | 1,996                        | 2,153 |
| Total                   | 230                | 3,670                      | 112                  | 2,387                        | 6,399 |

6,399 persons had a disability in both hands and legs. Of these 53 suffered from loss of both hands as well as both legs while 1,996 had paralysis of both hands as well as of both legs.
