## PREFACE

The Survey of Demographic & Social Aspects 1986/87 is the fourth in the series of surveys conducted by the Department of Census & Statistics under the National Household Survey Programme.

This survey covered a sample of 25,000 housing units at all island level in twelve monthly subrounds.

The present publication, which is a final report, contains a comprehensive set of statistical tables at National, Sector and District level on Demographic, Health and Housing sections.

This report was prepared under the guidance of Mrs. D.B.P.S. Vidyaratne, Deputy Director, and under the supervision of Mrs. S.M. Rajapakse, Statistician assisted by Mrs. J. Nagendran, Statistician, then Statistical Officer and Mrs. D. Dissanayake, Statistical Officer. Mr. G. Premaratne, Statistician was responsible for the cleaning of data assisted by Mrs. D. Dissanayake, Statistical Officer.

I am grateful to the staff of Sample Survey Division, who have contributed at different stages of this survey. Acknowledgements are also extended to the Deputy Directors and System Analyst/Programmers of the Data Processing Division for the processing of data. The Deputy Director and his staff of the Printing Division is responsible for printing of this report.

Finally I wish to thank the District field staff who extended their co-operation for the successful completion of the survey.

A.A.D. Cyril Yasasiri  
Director

## INTRODUCTION

This survey is the fourth in the series of surveys conducted by the Department of Census and Statistics under the National Household Survey Programme. The survey was conducted during the period from June 1986 to May 1987, in twelve monthly subrounds.

This survey will provide comprehensive information on Demographic Characteristics, Migration, Health, Housing and Access to Basic Amenities and Cultural Aspects.

As in any survey, general demographic information has been collected to cross classify variables of other sections viz. migration, health etc. by demographic characteristics of the population.

Information on internal migration was one of the subjects which has been covered in this survey. In addition to fertility and mortality, the third factor affecting population change in a given area is migration. The movement of population from one area to another affects its age, sex composition and geographical distribution. This movement of population within the national boundaries of a country is called the internal migration and the movement across the national boundaries is called the international migration. This survey provide information on long term, medium term as well as short term migration.

Information on health status of its population and utilization of health services is a basic requirement for planning and evaluation of health services in the country and for monitoring the health status of the population. This survey gathered information on health such as age, sex distribution of these patients, their household income, employment, household size and composition, their housing conditions, sources of water for drinking, toilet facilities available for them etc. which generally cannot be obtained through service statistics.

Information on Housing and Access to Basic Amenities were also collected in this survey. Detailed information on housing which are very essential for planning and policy formulation in this area were collected through this survey.

Information on Cultural and Recreational activities were also collected at this survey such as usage of

spread over a period of 12 months to cover the seasonal fluctuations of some variables collected in this survey. The field work of the survey was taken place from June 1986 to May 1987.

Approximately 250 statistical Investigators who belong to the permanent field staff of the Department of Census and Statistics were primarily involved in the listing and survey operations. Statistical Officers attached to 25 Administrative districts functioned as immediate supervising officers.

Allocation of Sample by districts and sectors is given in the table below.

Allocation of Sample Housing units by District & Sector

## 1. DEMOGRAPHIC CHARACTERISTICS

Demographic characteristics of all the members of the household who usually live there were collected in this section. Information collected in respect of these members were relationship to head of the household, sex, age (completed years) race, religion, attendance at school or other academic institute, level of education (for persons age 5 years and above) literacy and marital status (for persons age 10 years and above).

Apart from these their main occupation, principal activity, industry, employment status, whether had a secondary occupation or not, income, main source of income were also collected from persons age 10 years and above. A question on "adult literacy" was introduced for persons age 15 years and above, those who have not passed at least grade 5. Here if they belong to the eligible category they were asked to read and write a small paragraph (which has been provided by us). Therefore most important thing here is they were practically checked whether they can read and write without simply getting an answer to the question.

Information sought from persons who usually live elsewhere in the country or abroad were district (if he/she live in the same country) or country, reason for going abroad and occupation (if he/she employed in abroad).

## CONCEPTS AND DEFINITIONS

### Housing Unit

A housing unit is defined as a place of residence, (a) which is separate from other places of residence, ie. where there are walls or partitions separating it so that the persons occupying it can live separately from other persons in the building or in the locality, and

(b) which has independent access, ie. it has a separate entrance so that the occupant can enter and leave without passing anybody else's living quarters.

A housing unit may contain one or more households. Living quarters other than housing units and non-housing units are excluded for this survey.

## (2) Non-Housing Units.

Every building or part of a building which is not used as a place of residence for eg. office, petrol filling station, shop etc.

### Household

Household consist of one or more persons, living together and having common arrangements for food and other essentials of living. They may be related or unrelated persons or a combination of both. They are however expected to pool their incomes and have a common budget to some extent if not totally. Domestic servants, boarders and lodgers who live and have their meals or share the other essentials of living with the family are also treated as members of the household. However, if the total number of boarders and lodgers exceeds five, then the household should be considered as an institutional unit and therefore not to be included in this survey. Persons who usually live here but are temporarily away on holiday, visiting relatives, out on business or receiving treatment in a hospital should be included as members of the household but temporary visitors should be excluded.

### Head of Household

The head of household is the adult member male or female who is primarily responsible for the maintenance, support and care of the household. She/He may be an elder member regarded as the head by the other members of the household. Where there is more than one household in a unit each household should have its own head of household.

### Literacy

A person who can both read and write with understanding a short statement is considered as "literate". A person who can read and write only his name, figures or a memorised phrase should be considered as "illiterate".

### Marital Status

The marital status of a person refers to the current "de facto" conjugal status of the person. A person claiming to be married according to custom or repute should also be treated as married, although the marriage has not been registered according to law.

"Separated" refers to a person who has been granted a decree of separation by law and not to a person merely living in separation.

#### Employer

A person who operates his/her own farm, business , enterprise or service undertaking with the assistance of one or more employees.

#### Employee

A person who works for wages, salaries, commissions etc, whether on a permanent basis, temporary basis or casual basis, whether on time rate or piece-rate.

#### Own-account Worker

A person who operates his/her own farm, business enterprise or a service undertaking without the assistance of any paid employees. Persons employing only unpaid family workers and domestic servants should be included in this category.

#### Unpaid Family Worker

A person who works in a family farm, business enterprise or service undertaking without payment in cash or in kind.

#### Unemployed

Persons 10 years of age and above who did not work last week had no job or enterprise and were available for employment.

#### Student

Persons engaged in studies as her/his main activity. She/He may be attending school or some other educational institution or may be studying as a private student. Full time students who did some work (in the family or enterprise) as an unpaid family worker are not considered as employed for this survey because her/his principal activity is "student" and not "employed".

#### Retired/Unable to work

Persons not employed or unemployed as defined alone, who had retired from employment and/or were unable to work due to disability or ill-health.

etc. which are carried out for the maintenance of the household are considered as household work. Persons who did some work (in the enterprise) as an unpaid family worker are not considered as "employed" for this survey. Her/His main activity is doing household work as described above and will be considered as "Household worker".

#### Main Occupation

Main occupation is the occupation on which she/he usually works most of the time. If she/he is engaged in only one occupation then it should be the main occupation.

#### Industry

The nature of economic activity carried on at the place here a person works is referred to as the "Industry". If more than one activity is performed at the work place nature of work done by the division where this person works should be given, eg. a typist works in the advertising division of a firm when there are two divisions, namely advertising and legal services, the industry in respect of this person is advertising. If he does typing for both divisions give a note to say that he works in both advertising and legal services divisions.

## 2. HEALTH

The objectives of the Section on Health of Demographic and Social Aspects Survey 1986/1987 was to collect information on morbid conditions of the people and to assess the access to health care facilities of the households in the island during a reference period of 12 months in 1986/1987.

Information was sought under eight main topics viz; Acute illness, Chronic illness, Accidents, Disability, Expenditure on medical facilities, health services, children born last 24 months prior to the survey date and Immunization. First four of these concentrate on the current morbid conditions of the members of the households. The types of information collected were the nature and duration of the episode, absence from usual activities due to illness, whether treatment was taken and nature and source of treatment taken. Further queried, if a person has taken treatment from different sources, order of preference, reason for changing the source of treatment and the distance to the institution. Kind of impairment caused by accidents and disability are also inquired. Accidents are grouped under 5 main types and the reference period was last 12 months.

Under disability few more questions were asked whether the disabled person is capable of learning or earning, his/her performance restricted and special education or training is given to her/him.

Medical expenses incurred by the household during a period of 14 days prior to the survey date was collected. In addition, payments to medical institutions were collected for last 14 days as well as for last 12 months.

The section on Health was concluded with collecting information from mothers who have given birth during 24 months prior to the survey date. Data was gathered on sex, date of birth of child, place of occurrence of birth, birth weight, whether breastfed, any deaths of new born, total number of previous live births, number of children presently alive and immunization etc;.

Data on Sources of Treatment was collected considering upto 3 visits to an Institution by an individual. Therefore the number given in the total column is more than the number of individuals. This fact is observed in the Tables where there are cross-classifications with Source of Treatment.

## CONCEPTS AND DEFINITIONS

Live Birth

### Acute illness

Acute conditions of illness or injury are generally characterized by (1) sudden onset (2) finite duration and/or (3) restriction of normal activities. They may be caused by temporary or chronic diseases or by an injury, accidental or deliberate.

### Chronic illness

Chronic illnesses are generally characterised by (1) insidious onset (2) gradual progression of symptoms over a long period and/or (3) problems of a permanent nature resulting from a series of acute conditions. Some of them may be congenital. They may or may not restrict usual activities, although over a long period a gradual change may be recognisable. They may or may not be known to the individual in the initial stages, but over a long period either because of the occurrence of a series of acute conditions, some of which may have been medically treated or because of a periodic medical examination, the individual may be aware of the condition.

### Accident

An unexpected sudden occurrence resulting an injury or ending up in death of one or more individuals. It does not include cases of violence and self inflicted injury.

#### (1) Accidents at home

Accidents which occur at residences or home premises eg. burns, cuts, falls, accidental poisoning, falling into a well, etc.

#### (2) Transport accidents

This means any accident involving a device designed primarily for, or being used at the time primarily for conveying persons or goods from one place to another. Include accidents involving aircraft, boat, motor vehicle, railway, other road vehicle, animals carrying persons, animal drawn vehicle etc.

Accidents involving agricultural and construction machines such as tractors, cranes and bulldozers are regarded as transport accidents only when these vehicles are under their own power on a highway. Otherwise these vehicles are regarded as machinery. Motor accident which occurs when engaged in a race is considered as a sports accident and not

(4) Sport accident

These are accidents which occur while engaged in sports activities.

(5) Accidents due to natural and environmental factors

This includes accidents caused by natural factors such as floods, landslides, lightning, tidal waves etc.

### Disability

A disability is defined as any restriction or lack of ability (resulting from an impairment) to perform an activity in the manner or within the range of limits considered normal for a human being (given the age and sex), an impairment being any loss or abnormality of physical, mental or psychological functions and they may be temporary or permanent. Some of them may be the result of accidents while some others may be attributable to internal disease or malfunction. In this survey the inquiry is confined to physical disabilities resulting from such impairments and they are as follows.

- (1) Locomotor - Including ambulator and confining disabilities involving free movement of the person.
- (2) Communication - Including disabilities in speech learning vision or combination thereof.
- (3) Personal care - Including disabilities in feeding, excretion, personal hygiene etc.
- (4) Dexterity - Including disabilities in performing manual activities such as use of fingers, grasping, holding etc.
- (5) Other - Including disabilities in body movements, reaching, retrieval and crouching and performing normal domestic functions.

### Impairment

An impairment is any loss or damage or abnormality of psychological, physiological or anatomical structure or function. They may be temporary or permanent. Some of them may be the result of accidents while some others may be attributable to internal disease or malfunctions. Here we consider only the impairments caused by accidents.

Physical impairments may be classified as follows.

- (1) Aural - Of auditory sensitivity
- (2) Language - Of language functions and speech
- (3) Ocular - Of visual acuity
- (4) Visceral - Of internal organs including brain, lungs, heart, stomach, intestines etc.

### 3. HOUSING AND ACCESS TO BASIC AMENITIES

#### CONCEPTS AND DEFINITIONS

##### Single house

A single house is a separate and independent housing unit standing by itself, and is not attached to another unit as in a twin house, flat, etc. It may consist of one or more storeys. Units constructed of inferior materials such as cadjan, waste materials such as packing cases, planks, etc. should not be classified in this category even if they stand alone. They should be classified under "an improvised structure".

##### Attached house

These are housing units located in a row adjoining each other. There may be two or more housing units in a row. Annexes and line rooms should not be included in this category.

##### Flat

An apartment or a suite of rooms in a multi-storied structure with more than one housing unit. A single house with two or more storeys do not belong to this category.

##### Annex

A housing unit, usually one among several adjoining the main house. Generally these units are not similar to each other. The main house should also be included in this category.

##### Improvised structure

These are housing units generally constructed of inferior or waste material such as cadjans, hay, planks, etc. Shanties should be included in this category.

##### Line rooms

These are single roomed housing units of the type provided to labourers. This category refers to the type of labourer's in estates, in industrial areas etc. These houses are generally found in a row adjoining each other.
