### STUDY TYPE

Enterprise Survey [en/oth]

### SERIES INFORMATION

This half-yearly sample survey was initiated in September, 1972 by the Department of Labour in pursuance of a UNDP/ILO project for the development of Labour Statistics. Since then the survey has been regularly conducted for the collection of data on earnings, hours of work and related matters for March and September of every year from a sample of establishments with 5 or more paid employees.

In 1975 the survey was restricted to once a year, the month of March being the reference period.

The Sample Survey of Establishments on Employment, Earnings & Hours of Work - March, 1975 is the fourth in the series.

### ABSTRACT

The survey covers a sample of larger establishments with five or more paid employees engaged in production, distribution, construction, transport, storage and other business activities like finance, insurance, business services etc, which come under the broad definition of "Industries". It covers both public and private sectors. The public sector coverage is limited to Boards, Corporations, Co-operatives and some Government Departments like the Department of Buildings, the Marketing Department, the Government Factory, and the Railway Workshop which are engaged in the types of activities mentioned above. The bulk of the public services i.e. Government Departments other than those mentioned above Offices, Schools, Hospitals etc, are not covered in the survey as they do not come under the definition of "Industries".

The objective of the sample survey is to collect detailed labour statistics on a repetitive basis to indicate trends. Statistics of earnings and hours of work are collected including number employed, man days worked and paid for normal, and overtime man hours and the components of the total wage bill. These statistics are collected according to the eightfold broad occupational categories e.g. Administrative & Managerial Workers, Professional, Technical and Related Workers, Clerical and Related Workers etc.

## Sampling

## SAMPLING PROCEDURE

A method of stratified cut-off random sampling is adopted to select a sample which is about 1700 establishments for the survey from some 12,000 establishments which furnish returns under the annual employment survey of the previous year. First 22 industry strata have been set up to give the estimates for the sampled data for each industry stratum, with a five percent error at 95 percent confidence level. In each industry stratum all establishments above a particular size ( defined to be the cut-off point ) were included in the survey and the rest were sampled such that the sample would be optimum in size. It was noticed that in 18 out of 22 industries, the number of employees per establishment was less than 100 and in the other four industries the employment figure per establishment was well over 1000. Thus establishments with less than 100 employees in the 18 industries and establishments with less than 1000 employees in other four industries were sampled. All establishments employing over 100 and 1000 respectively were automatically included in the survey.
