STUDY TYPE
Income/Expenditure/Household Survey [hh/ies]

SERIES INFORMATION
The HIES series which started in 1980 was conducted once in every five years until 2006/07 and thereafter, as rapidly changing economic conditions demanded far more frequent monitoring of income and expenditure patterns in the country, the DCS with the help of the rapid developments in the ICT, decided to conduct the HIES once in every three years in Sri Lanka. The HIES 2009/10 which was conducted three years after the previous survey, HIES 2006/07, is the seventh in the HIES series. This survey provides information on household income and expenditure in order to measure the levels and changes in the living conditions of the people, to observe the consumption patterns and to compute various other indicators such as poverty.

The data collection in the field is done in twelve monthly rounds to capture the seasonal variation of income and expenditure patterns of households. The data was collected by direct interviews based on a special schedule which had three sections:-

(1) Demographic characteristics
(2) Household expenditure (Food and Non-food items)
(3) Household income (Monetary and Non-monetary income)

ABSTRACT
This survey provides information on household income and expenditure to be able to measure the levels and changes in the living condition of the people, to observe the consumption patterns and to compute various other indicators such as poverty, food ratio, gini co-efficient of income and expenditure etc.

Key objectives of the survey
- To identify the income patterns in Urban, Rural, Estate Sector and Districts.
- To identify the income patterns by income levels.
- Average consumption of food items and non food items
- Expenditure patterns by sector and by different income levels.
- To identify the incidence of poverty by sector and income levels

Sampling

SAMPLING PROCEDURE

A two stage stratified random sample design was used in the survey. Urban, rural and estate sectors of the District are the domains for stratification. The sample frame is the list of buildings that were prepared for the Census of Population and Housing 2001.

Selection of Primary Sampling Units (PSU's)

Primary Sampling Units are the census blocks prepared for the Census of Population and Housing - 2001. The sample frame, which is a collection of all census blocks in the domain, was used for the selection of primary sampling units. A sample of 2500 primary sampling units was selected from the sampling frame for the survey.

Each selected block was updated to include newly built housing units and excluded demolished housing units, which are no longer in existence. This updating operation was also carried out over a period of 12 months, starting from June 2009 to May 2010. For each PSU, updating was done about one month prior to the scheduled interviewing.

Selection of Secondary Sampling Units (SSU's)

Secondary Sampling Units are the housing units in the selected 2500 primary sampling units (census blocks). From each primary sampling unit 10 housing units (SSU) were selected for the survey. The total sample size of 25000 housing units was selected and distributed among Districts in Sri Lanka.
