ABSTRACT

The Colombo Consumers' Price Index (CCPI) which was introduced in 1952 by the Department of Census and Statistics and which is now published on the last working day of every month is the official index by which changes in price levels of consumer goods and services in Sri Lanka are measured. Since then the index has been used to date for very vital purposes as described below. It is used for multi-purpose functions such as :

for conversion of total current values of national income up to fixed values,  
policy making on monetary income and wages,  
payment of salaries and wages,  
providing social security facilities and analysis of economic and social activities.

Thus the government mechanism and the non-government organizations use this index as the vital official measurement unit in the fields of financial, revenue, salaries, wages and socio-economic policy making.

## DATA COLLECTION NOTES

Collecting Centers & Procedure of Price Information

Collecting Centers are 15 markets covering the city of Colombo and other suburban areas in the Colombo District. They are, Pettah, Maradana, Wellawatta, Borella, Grandpass, Dematagoda, Kirulapone, Kotte, Nugegoda, Dehiwala, Mount Lavinia, Kolonnawa, Peliyagoda, Wattala and Mabile

In order to estimate prices for the purpose of computing the index, 03 groups of 05 officers each, four of whom are well trained in price collection, collect prices for two weeks at the rate of 2 days per week and again for two weeks at the rate of 3 days per week thus the total being 10 working days within a month under the supervision of a statistician.

In this connection, information on required goods and services is collected continuously from selected outlets according to the exact specifications. The price collecting officers as a practice purchase by themselves some specified items whose prices are liable to change frequently. The prices of other specified items are collected by them by inquiring from the outlets the same way as a customer does.

Whenever a specific item cannot be found in the market, substitutes available under the same specifications are selected. Based on prices of respective goods and services thus collected, the monthly average price is computed.
