Geographic Coverage
National coverage

Although this is a national level survey, coverage of Nothern and Estern provinces was not at a sufficient level of response due to the prevailing situation in this area.

The coverage was also limited because of the fact that there was no complete list of establishments for the whole country at the time of the survey.

Universe
The survey covered establishments with five or more paid employees in private sector and also semi-government institutions in public sector.

Sampling

Sampling Procedure
A complete list of establishments (survey frame) was available at the time of the first survey started in 1971. This list was compiled along with the list of buildings in the country prepared for the Census of Population and Housing 1971. There were about 22,500 establishments with 5 or more paid employees and thereafter this survey frame was updated annually, taking new registrations from the Employees Provident Fund lists.

Construction of indices:
Index numbers of employment are calculated with 1971 as the base year, and using the link relative method. Indices are computed for each major industry division,

Weighting of sample results:
The employment estimates are not weighted

Adjustments:
Non response : there are no adjustments for non response
Other bias   : no adjustments have been made for any other bias.
Use of bench mark data : none
Seasonal variations : not relevant

Indicators of reliability of the estimates :
Coverage of the sampling frame : coverage is limited, as there is no complete list of establishments for the whole country.
Sampling error/Sampling variance : not relevant
Non response rate :

Non sampling errors : the main known source of bias is the limited coverage of the survey due to the lack of a complete list of establishments for the whole country

Deviations from Sample Design
The coverage of the survey was badly affected due to the limiting factors such as the non availability of a complete list of establishments for the whole country and the nature of the method of data collection (postal survey method).

Data Collection

Data Collection Dates	start 2001-07-01 end 2001-07-31
Data Collection Mode	Mail Questionnaire [mail]

Data Collection Notes
1. Schedules were posted in the months of July/August.
2. Reminders were sent to the non-responding eastblishments in September
3. Parallel to the postal questionnaire, DCS officers visited the non-reponding institutions to collect data.
4. The data collection procedure continued till December.

Questionnaires
The questionnaire used in the Annual Employemnet Survey consists of three parts.

They are :
    1. Establishment particulars

2. Classification of employees
3. Occupational category

The questionnaire was printed in Sinhala, Tamil and English.

Supervision
Two Statistical officers were engaged in the supervision activities pertaining to sending and receiving the questionnaires, coding and tabulation of data.

Data Processing & Appraisal

Data Editing
An edit program was run to edit the raw data files.

Depending on the absence or presence of errors, the records in the raw data file were seperated into an error free file and a rejects file respectively. From the rejects file, a error report was generated indicating the reason for rejection of each record. The errors were checked and manually corrected on the report by referring to the questionnaire. Based on the corrected report, error records were updated by data entry operators.

The edit program was run again to edit the rejects file and the error free records were added to the error free file. If the rejects file was not empty the edit process was repeated.

Other Processing
The whole Data processing cycle consists of the following steps.

1. Accepting the filled questionnaires
2. Do a visual check for completeness
3. Preliminary editing and coding
4. Entry of data

5. Editing - Run edit program
6. Editing - Produce error report and return to the Statistical Division of the Labour Deprtment.
7. Editing - Correction of errors on the edit printout.
8. Editing - Change incorrect data using the corrected error printout
9. Editing - Re-run the edit program and repeat the error correction procedure

10. Consolidation of edited data files to prepare the Master file and re-coding of variables needed for analysis.
11. Produce final tables specified by the Statistical Division of the Labour Department..
