Sampling

SAMPLING PROCEDURE

Sampling plan and the sampling frame

Two stage stratified sampling procedure is adopted to select a sample of 25,750 housing units to be enumerated at the survey. The sampling frame prepared for 2012 Census of Population and Housing is used as the sampling frame for the sample selection of LFS in 2017.

Sample size

At the beginning in 1990, the sample size was 2,000 housing units per quarter in areas other than North and East, and the sample size was increased to 4,000 housing units per quarter in 1996 and continued thereafter. In 1992, 1997 and in 2004 an annual sample of 20,000 housing units was selected to give reliable estimates by district level. However, in order to provide district level estimates precisely, it was decided to use 20,000 - 25,000 housing units as the annual sample from 2006 to 2010. In 2017 25,750 Housing units were selected for the sample.

Sample Allocation

In 2017, 2575 Primary Sampling Units (PSU)s were allocated to each district and to each sector (Urban, Rural and Estate) by using the Neymann allocation method which considers the variance of unemployment rate as usually. The allocated sample for each district then equally distributed for 12 months.

The survey was conducted from January till December in 2017.

Selection of Primary Sampling Units (PSU)

Primary sampling units are the census blocks prepared at the Census of Population and Housing - 2012.

Selection of Secondary Sampling Units (SSU)

Secondary Sampling Units are the housing units in the selected 2575 primary sampling units (census blocks). From each selected primary sampling unit, 10 housing units (SSU) are selected for the survey using systematic random sampling method.

SUPERVISION

Regular field supervisions were carried out throughout the year to check the concepts and definitions are being used by the

enumerators accurately.

DATA COLLECTION NOTES

The field work of the survey for the year 2017 was conducted from January to December. The census blocks prepared at 2012 population census were used as primary sampling units. Listing operation for primary sampling unit update was conducted, at this survey.

In 2017, CAPI was introduced in 1st quarter and the field staff was trained. Eventually, at the end of year 2017 CAPI method was established in all districts for data collection and manual editing also had done where necessary.

The field staff of the DCS involved in survey data collection activities specially trained for CAPI method. A Deputy Director/Senior Statistician/ Statistician attached to each District Secretariat are responsible for coordination and supervision activities at district level.

QUESTIONNAIRES

Survey Schedule and CAPI Programme

Current survey concepts and methods are very similar to those introduced at the beginning. However, some changes have been made over the years in 2006, 2013, 2015, 2016 & 2017 to improve the accuracy and usefulness of the data.

The revisions focused on literacy, computer literacy, household economic activities, informal sector, employment and underemployment. However, the comparability of data has maintained

The questionnaire is attached as an external resource.

Data Processing

DATA EDITING

Data was processed by following 2 steps,

1. Feeding data to the CAPI system by enumerator.
2. Sending data to the head office through each district offices.

Computer edit check programs are used to capture unusual observations in the data files.

Data Appraisal

ESTIMATES OF SAMPLING ERROR

The estimation procedure is given in the section 2.6 in the Annual Report. The Annual Report is attached in the External Resources Section.

DATA APPRAISAL

The adjustments for non-response is given in the section 2.7 in the Annual Report. The Annual Report is attached in the External Resources Section.
